**LAKESHORE EAST
MASTER PLAN AND DESIGN STANDARDS**

Introduction

Lakeshore East is a new mixed-use community that will be developed on Illinois Center railroad land between Lake Shore Drive on the east, Michigan Avenue on the west, Randolph Street on the south and Wacker Drive on the north. Lakeshore East, located within Illinois Center east of Columbus Drive, will include residential, hotel, office, mixed-use development and a new public park.

Development on the approximately 52 acres of land within these Illinois Center boundaries has been regulated by a number of Planned Developments approved by the City of Chicago since 1969. Illinois Center is the subject of the existing Planned Development No. 70. This Planned Development was originally approved in 1969, it was subsequently amended in 1979, and then again in 1993.

Most of the Illinois Center property west of Columbus Drive has now been developed. East of Columbus Drive, there are also a number of existing buildings, including an office building at Three Illinois Center, the Blue Cross-Blue Shield building, the Swiss Grand Hotel and Five high rise residential buildings. In addition, west of Columbus Drive, the residential Park Millennium is currently under construction.

Lakeshore East will be created on approximately 28 acres of land that remain between Columbus Drive and Lake Shore Drive. The development of Lakeshore east will be guided by a new amendment

to Planned Development No. 70. This area is identified as Sub-Area E within Planned Development No. 70, and is currently occupied by a golf course facility and other open space located on the property east of Columbus Drive. Lakeshore East will be located within this area.

The 1993 Amendment to Planned Development No. 70 permitted approximately 14.5 million square feet to be constructed on a net developable area of 1.1 million square feet (28 acres) within Sub-Area E.

Under the new amendment to Planned Development No. 70 The Lakeshore East development will construct 9.7 million square feet of buildable area, which is approximately 2/3 of what was previously allowed. The net developable area has been reduced to under 700,000 square feet (14 acres) as a result of a significant increase in the land dedicated to the public for parks, open spaces and road rights of way.

Lakeshore East will create a new urban neighborhood including residential condominiums, apartments and townhomes, hotel, office, commercial, retail and mixed-use development and public open space including a new public park. A combined public school / park district facility is also anticipated to be included within the development.

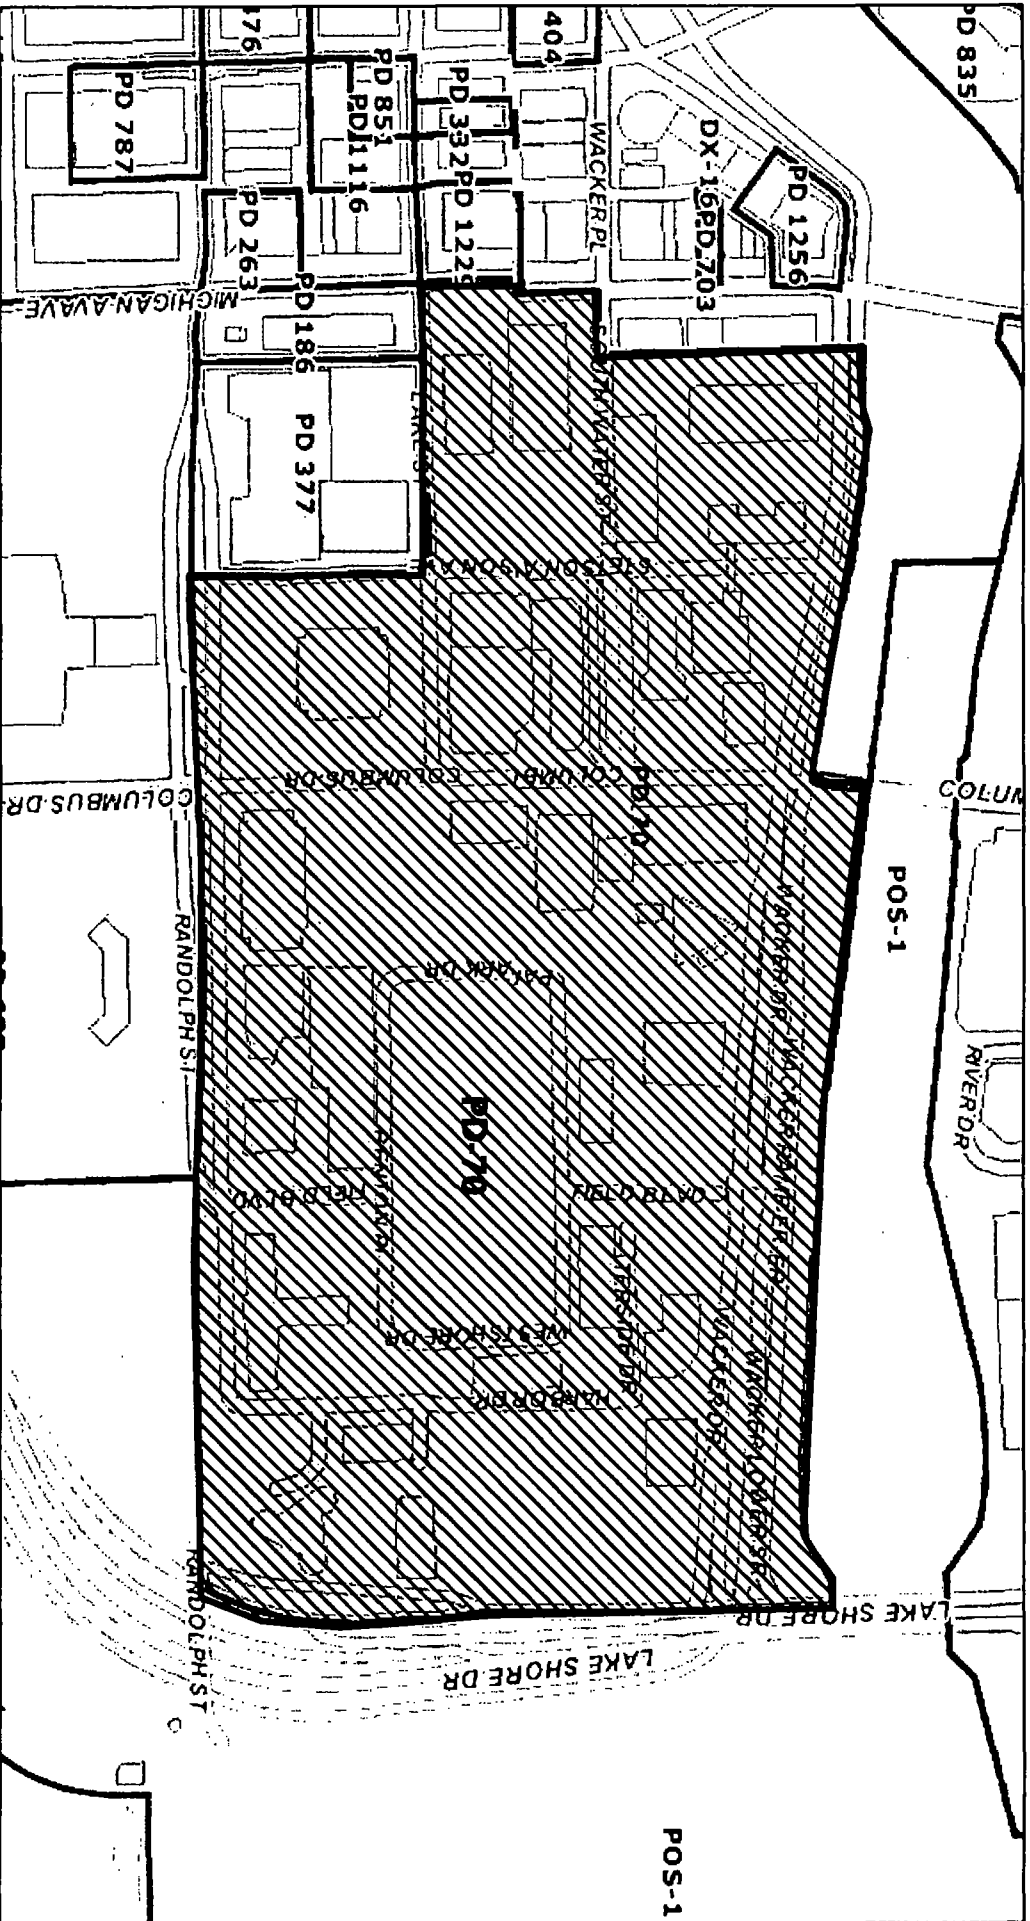

This Lakeshore East Master Plan and Design Guidelines Standards both illustrates and will guide the organization, scale, form and character of new buildings, streets and open spaces over time.

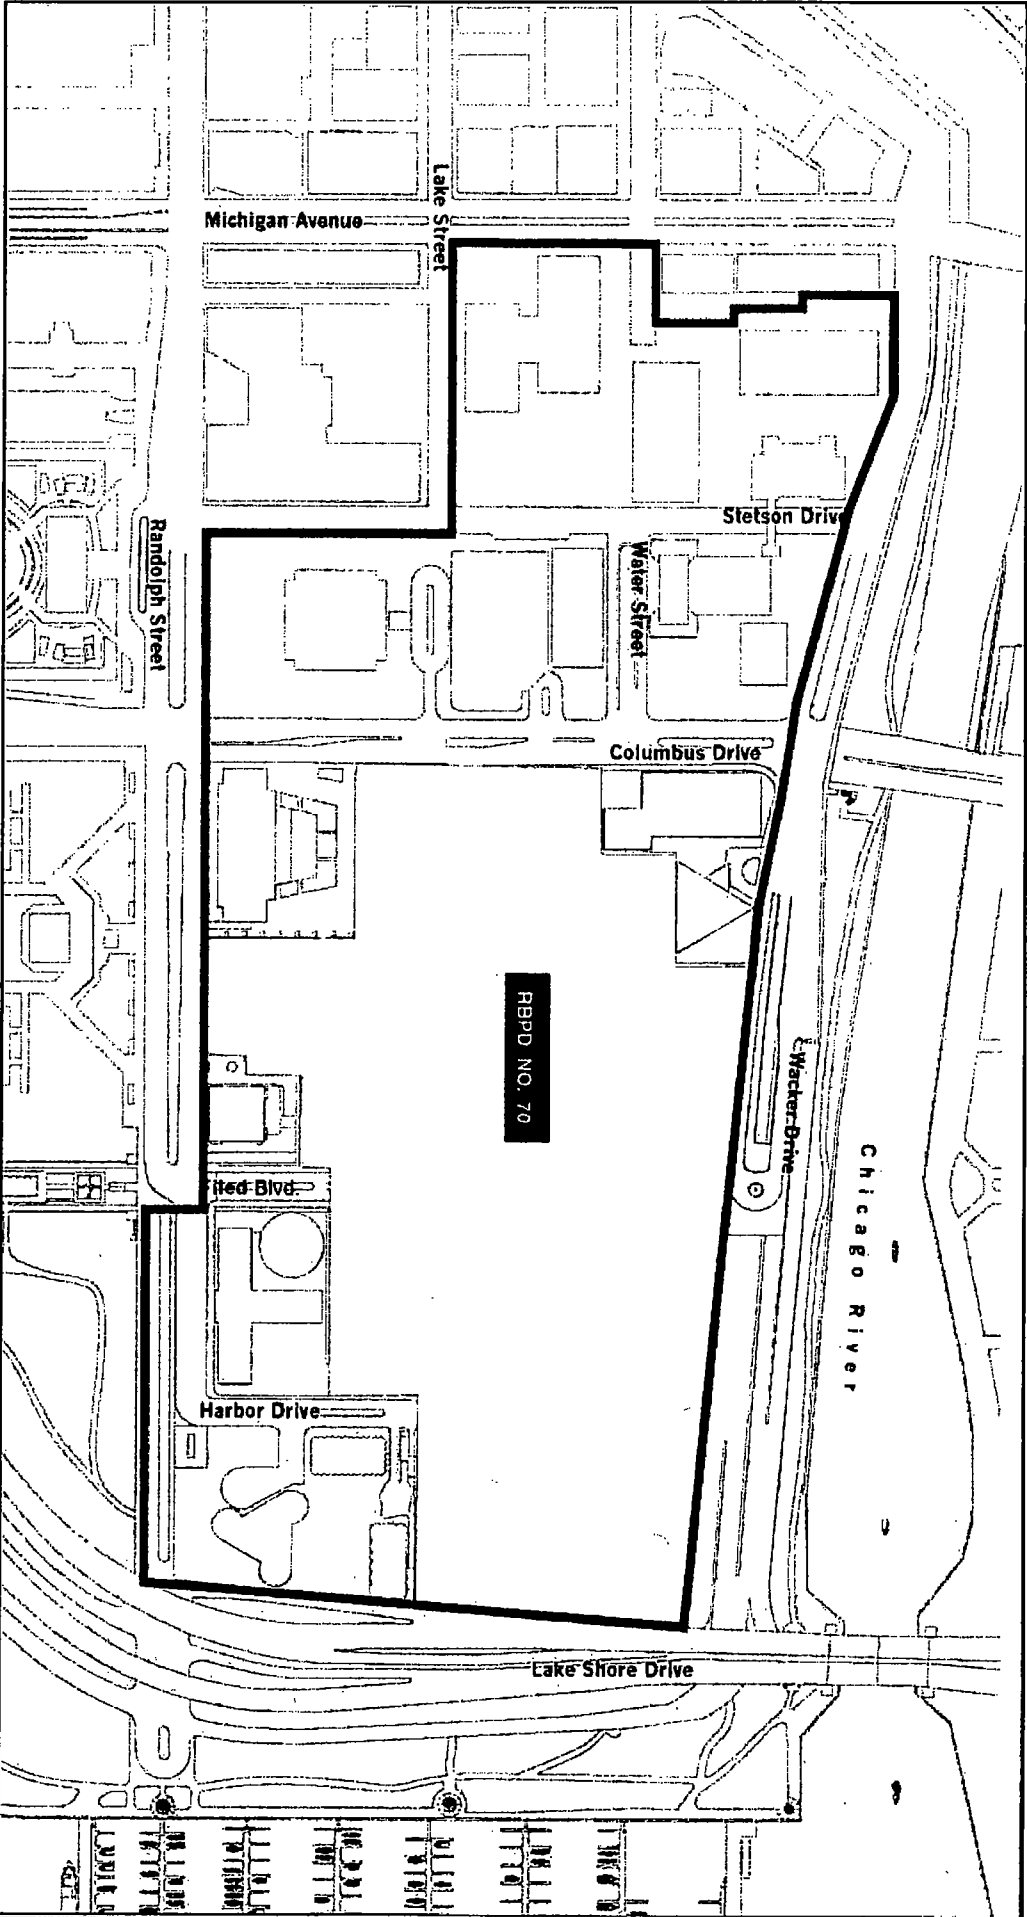

This document is intended to ensure that the future development of Lakeshore East is consistent with the vision and principles laid out in the *Lakeshore East Master Plan*

The document is organized into five sections:

- **Urban Design Principles**
Basic design principles that will guide future development
- **Development Summary**
The framework for development
- **Access and Circulation**
Connections for cars and people
- **Open Space**
Parks and courtyards to create a green neighborhood
- **Design Standards**
Guidelines that will shape the character of buildings, and the public realm

Site Context and Location

The Lakeshore East site is one of the largest remaining development parcels in the center of Chicago. Located at the mouth of the Chicago River at Lake Michigan, the site offers tremendous opportunities for new development and open space. The remarkable assets of this site include

- Proximity to the Loop, the East Loop, the Magnificent Mile, Navy Pier, DUSable Harbor, Grant Park, the Laketfront and the Chicago River
- Spectacular views of the city and the waterfront
- Diverse uses on surrounding blocks, including offices, hotels, residential
- Proximity to transit including the METRA, CTA, Rail and the new busway to McCormick Place
- Proximity to Grant Park Parking Garages

To respond to the unique context of the site, a set of urban design principles have been developed that address the following issues:

- *The Urban Framework*
- *Building height and massing*
- *Access and Circulation*
- *Open Space*
- *View Corridors*

General Intent / Site Context and Location

The Master Plan sets forth the basic principles and controls needed to guide the development of the +/-28 acres Lakeshore East development. The Master Plan Standards will guide the development of Lakeshore East as it becomes a vibrant urban district supporting 9.7 million square feet of new residential, hotel, office and mixed use development.

It is also the intent of the Master Plan to enhance the urban fabric and character of Chicago's central area, while also achieving the goals of the City of Chicago and the developer criteria set forth for the Lakeshore East area by a 1993 Planned Development

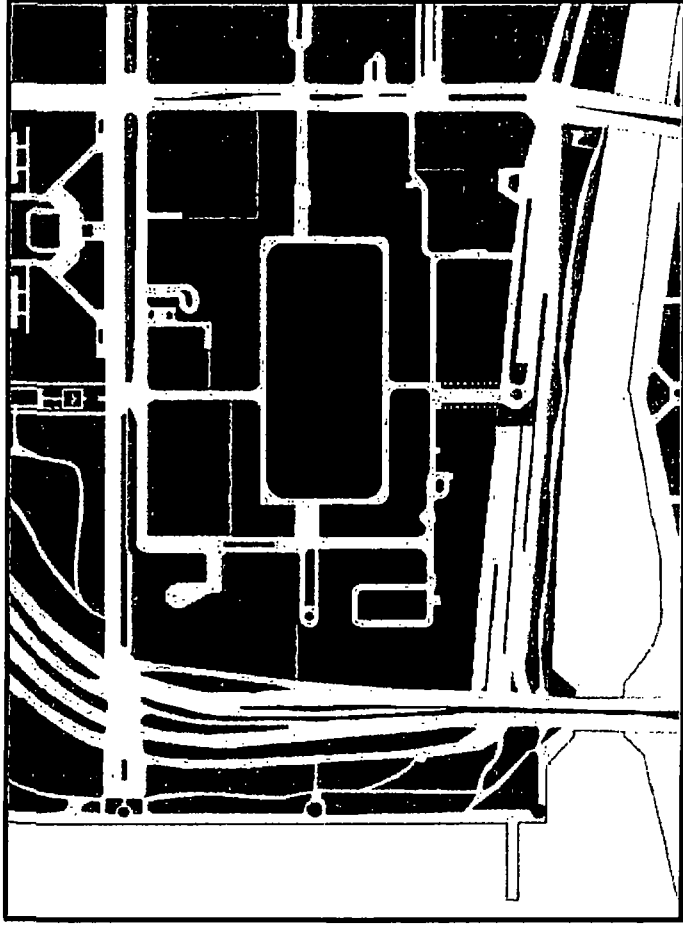

The Master plan offers a development framework intended to ensure that as Lakeshore East evolves, it will provide a high quality of life for its residents and neighbors alike. The pattern of development blocks, streets and open spaces will connect Lakeshore East and adjacent developments and amenities. This framework will also strengthen the areas adjacent to the site, offering access to Lakeshore East's amenities and connections through this new district to other neighborhoods, the Chicago River and the laketfront.

Urban Framework

- Establish urban blocks which are similar in size to typical downtown Chicago blocks
- Create urban streets in character with those of a residential neighborhood
- Create addressing opportunities for multiple buildings per block

Subarea E
A single, contiguous development site.

Proposed development plan:
Establish urban-scaled blocks and extend the local street system into the development to avoid the potential perception of a 'super-block'

Building Height and Massing

- Place tall buildings with a sensitivity towards existing residential towers
- Frame the park with low-rise development and townhouses which can screen all existing and future parking podiums from view
- Place the tallest buildings along Columbus Drive and at key prominent locations
- Strengthen the character of the urban street wall, or facades, on Wacker Drive along the Chicago River
- "Stagger" high-rise buildings to maximize views throughout the future development

Low-rise townhouses can screen parking podiums from the street

Building massing and height should be sensitive to existing towers, street walls and view corridors

Access & Circulation

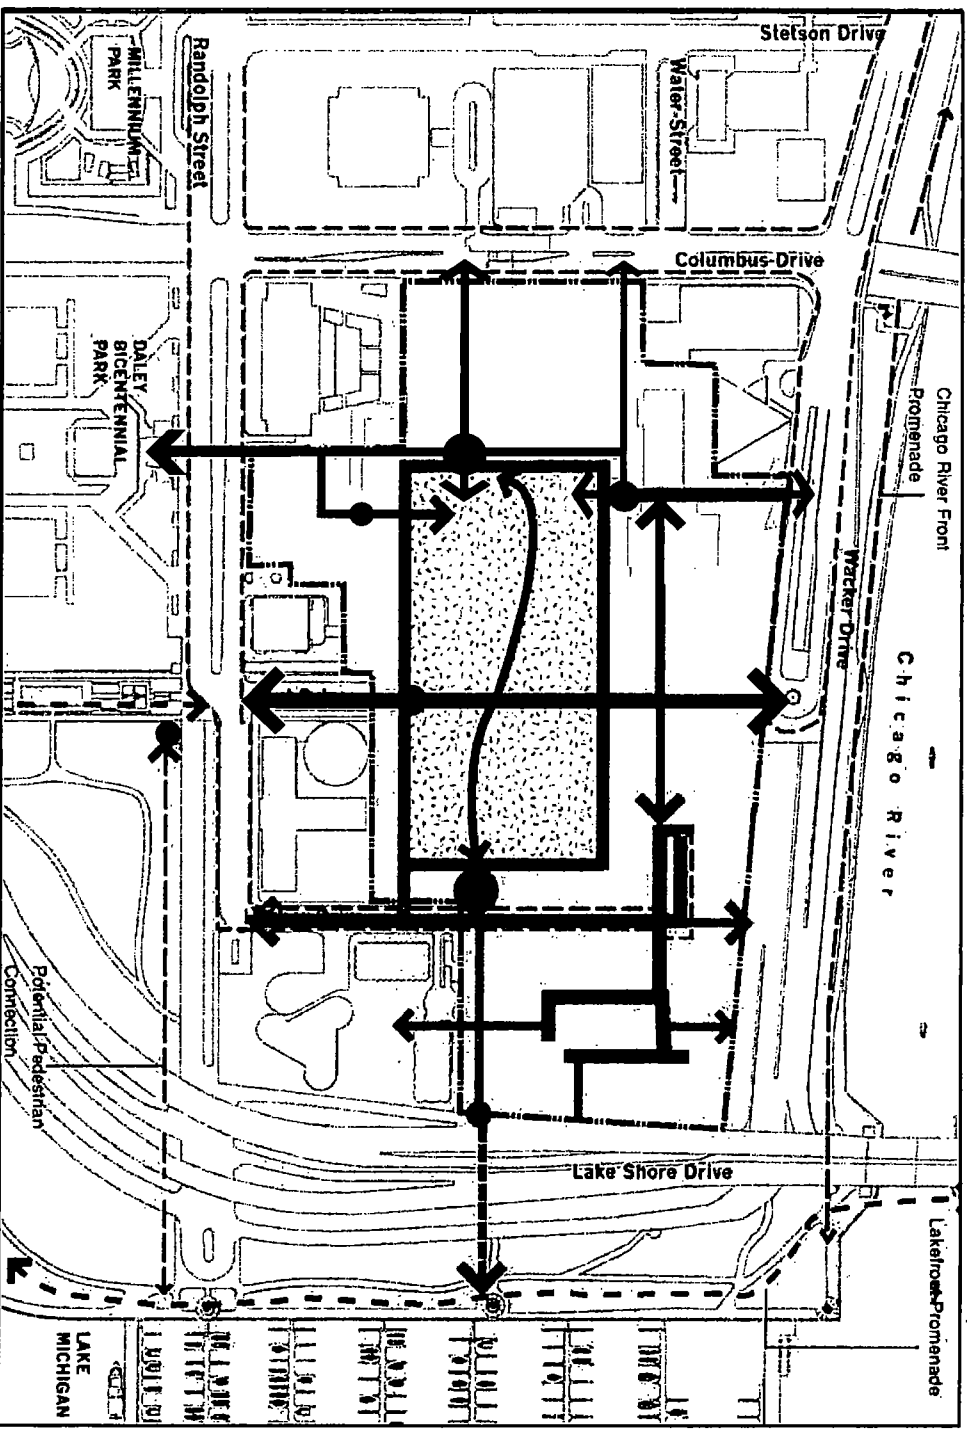

- Maximize connection to surrounding development
- Create a permeable neighborhood
- Weave the different levels together
- Strengthen pedestrian connections to the river and lakefront
- Provide convenient parking, drop-off, and service access without negatively impacting the existing streets

Diagram Legend:

The Diagram to the right represents a hierarchy of connectivity. The large arrows represent the major or primary access corridors of the site. They represent both pedestrian or vehicular traffic depending on their location. The smaller arrows indicate the secondary corridors of access.

The circles represent the major vertical connections of the site which allows the pedestrian to access the different levels of the development.

The dark dotted arrows indicate existing connections along the Riverfront, Lakefront and to Grant Park at the lower level. The light dotted arrows identify existing pedestrian movement along the major streets at the upper level.

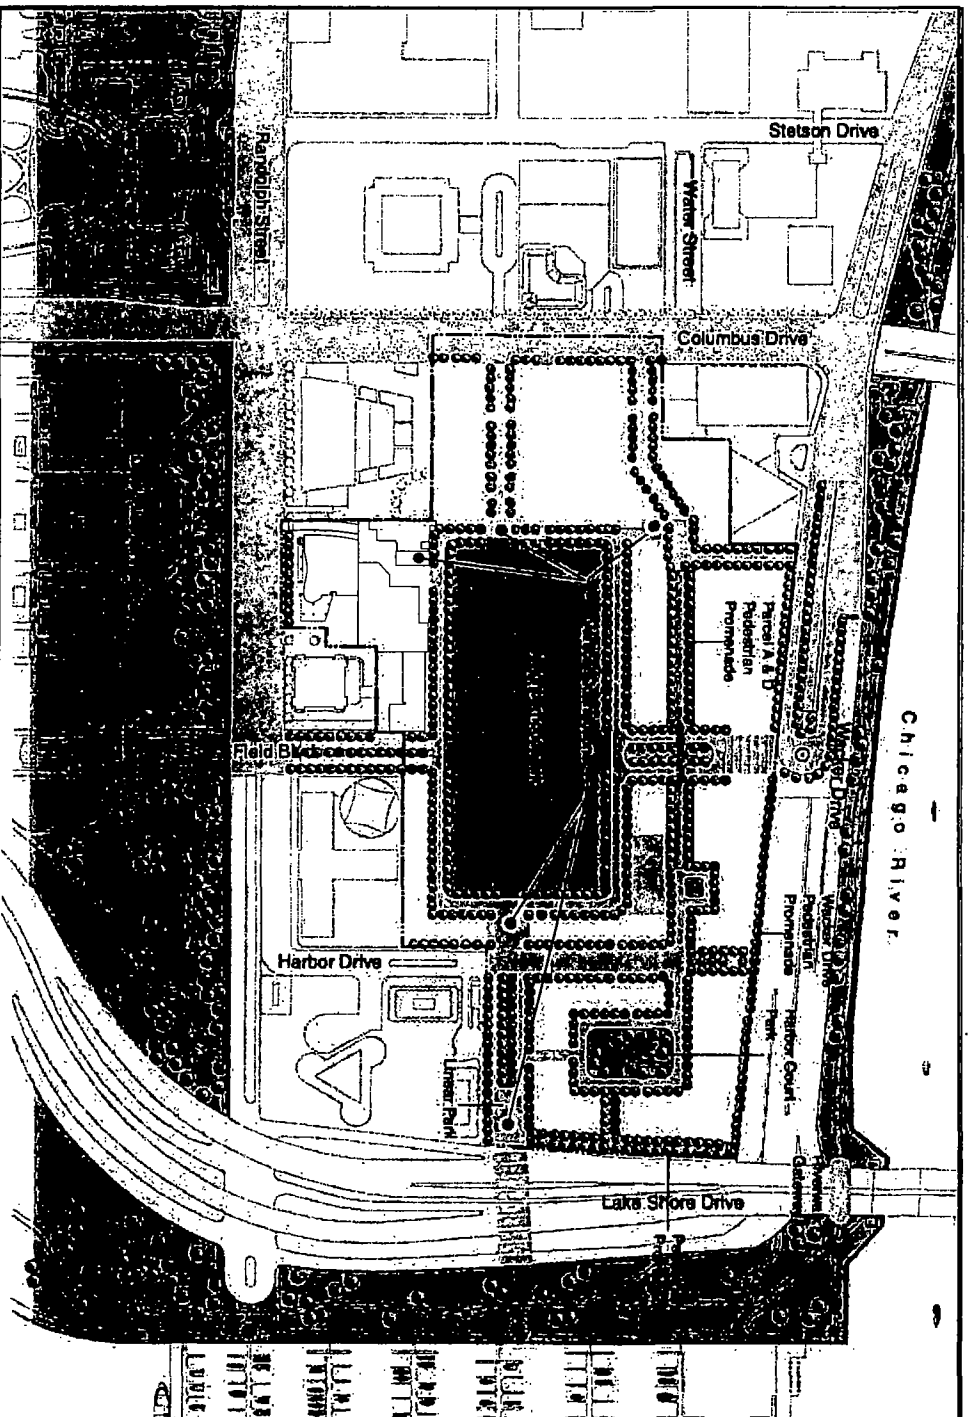

Maximize connectivity to surrounding development and create a permeable neighborhood

NOTE: These plans are diagrammatic in nature and are only intended to show approximate dimensions and locations.

Open Space

- Create a large neighborhood park as the focus of Lakeshore East
- Create smaller courtyards between buildings.
- Connect the open spaces in Lakeshore East to Grant Park, the Chicago Riverwalk and the lakefront park system
- Create well landscaped 'green' streets.

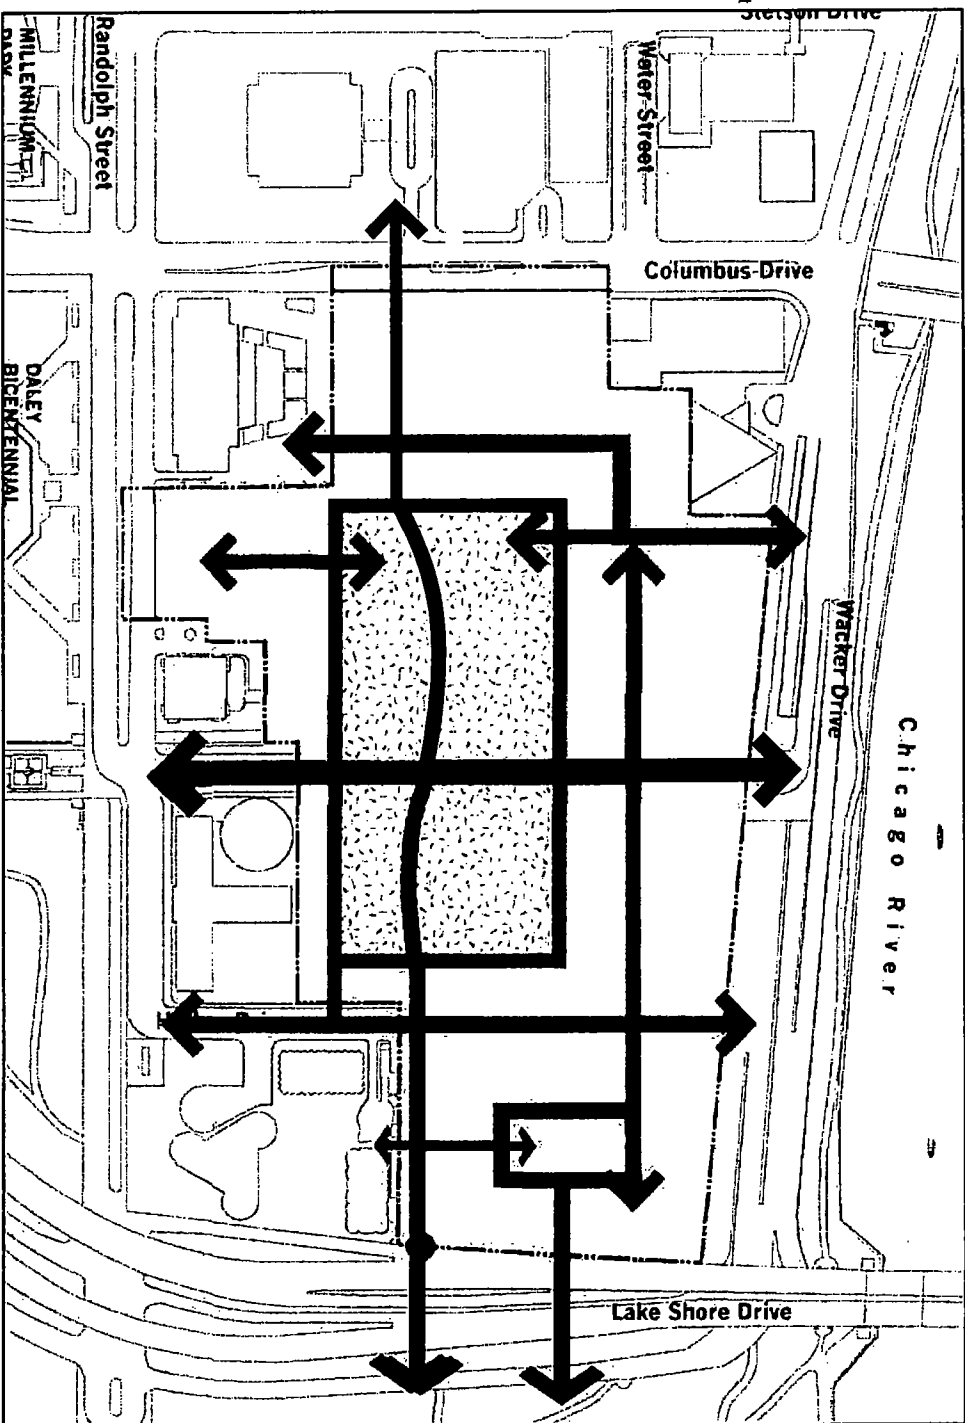

View Corridors

- Ensure a visually permeable neighborhood
- Create east / west and north / south view corridors
- Maximize views from existing residences
- Place tall buildings at the northern edge of Lakeshore East
- Maximize views to the central park
- Create appropriate building separation to allow for views through the development

Diagram Legend:

The large arrows and thicker lines represent the major view corridors of the site.

The smaller arrows represent the secondary view corridors of the site.

Introduction

The master plan for Lakeshore East establishes a framework of 7 development parcels. These development parcels are defined by a network of addressing streets at various levels. Parcel dimensions have been established that will allow for flexibility in accepting a variety of land uses and building types.

The intent of the master plan is to develop a new, vibrant urban district that promotes a collective image for Lakeshore East. This may be achieved through a consensus that is based on the following principles:

Land Use

- New development should be compatible with neighboring uses.
- Locate Office uses at the western portion of the site, adjacent to existing office buildings, office could locate along Wacker Drive limited by the location of the upper level roadway of Wacker Drive
- Locate residential uses adjacent to and within views of the neighborhood park, Chicago River, and / or Lake Michigan
- Provide a future school site within the park

Parcelization

- Ensure the creation of an urban framework of streets and blocks
- Allow for future development flexibility

Development Plan

- Locate taller buildings with a sensitivity towards existing view corridors from neighboring buildings
- Frame the neighborhood park with townhomes or low-rise development with taller buildings beyond.

Parking

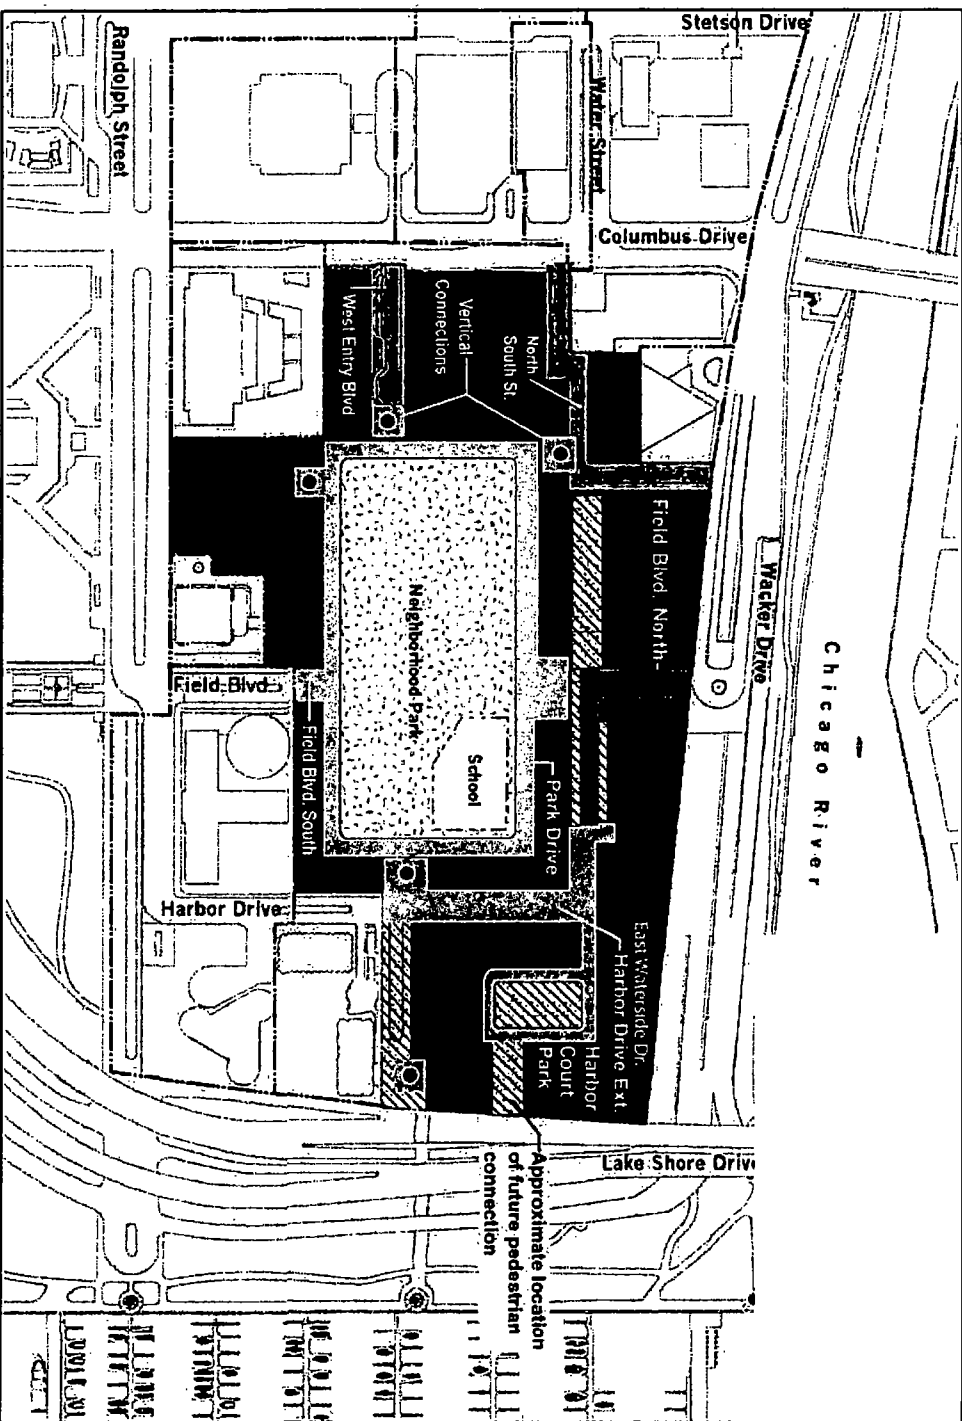

- Maximize on-street parking
- Screen all structured parking from view
- Develop below grade parking lined with townhomes which front onto the park

4.0 Access and Circulation

- Vehicular Access and Rights-of-Way
- Automobile Entrance Zones / Parking Access
- Pedestrian Access
- Right of Way Criteria

Introduction

The family of streets identified within this master plan establishes an identity and character for this neighborhood. These street types address the complexities of the site and the different levels, while emphasizing the pedestrian character of the development. The framework of streets and sidewalks has been designed to provide separate vehicular and pedestrian paths, while ensuring an active and energetic street environment. Pedestrian safety and easy access between the different levels must also be ensured throughout the plan. Gracious sidewalk widths, ground level activities and distinctive landscape treatments will create a strong pedestrian environment for the neighborhood.

Each of the streets has been designed to serve equally as an open space amenity and a vehicular travel zone. The local streets lead to and link the new public park to each major block. This concept is strengthened by the provision for interior courtyards and other public spaces that directly link to the main pedestrian paths.

The following street types and sections respond to the anticipated levels of vehicular traffic within the neighborhood. They also establish a connected network of intimately-scaled, pedestrian oriented streets. These guidelines address the following principles

Streets

- Create well-scaled, tree-lined streets which strengthen the pedestrian environment
- Extend Harbor Drive north in order complete the local residential street system
- Ramp Field Drive down from upper Randolph Street and connect it to a new Park Drive ringing Me park at the natural grade level
- Provide a new internal street at the upper level to provide multiple access and address points for the western parcels

Parking Access

- Provide convenient access from the upper intermediate and lower levels
- Locate parking access mainly within interior courts or side streets

Service Access

- Locate service access at the lower level
- Utilize utility easements for service access

Pedestrian Access

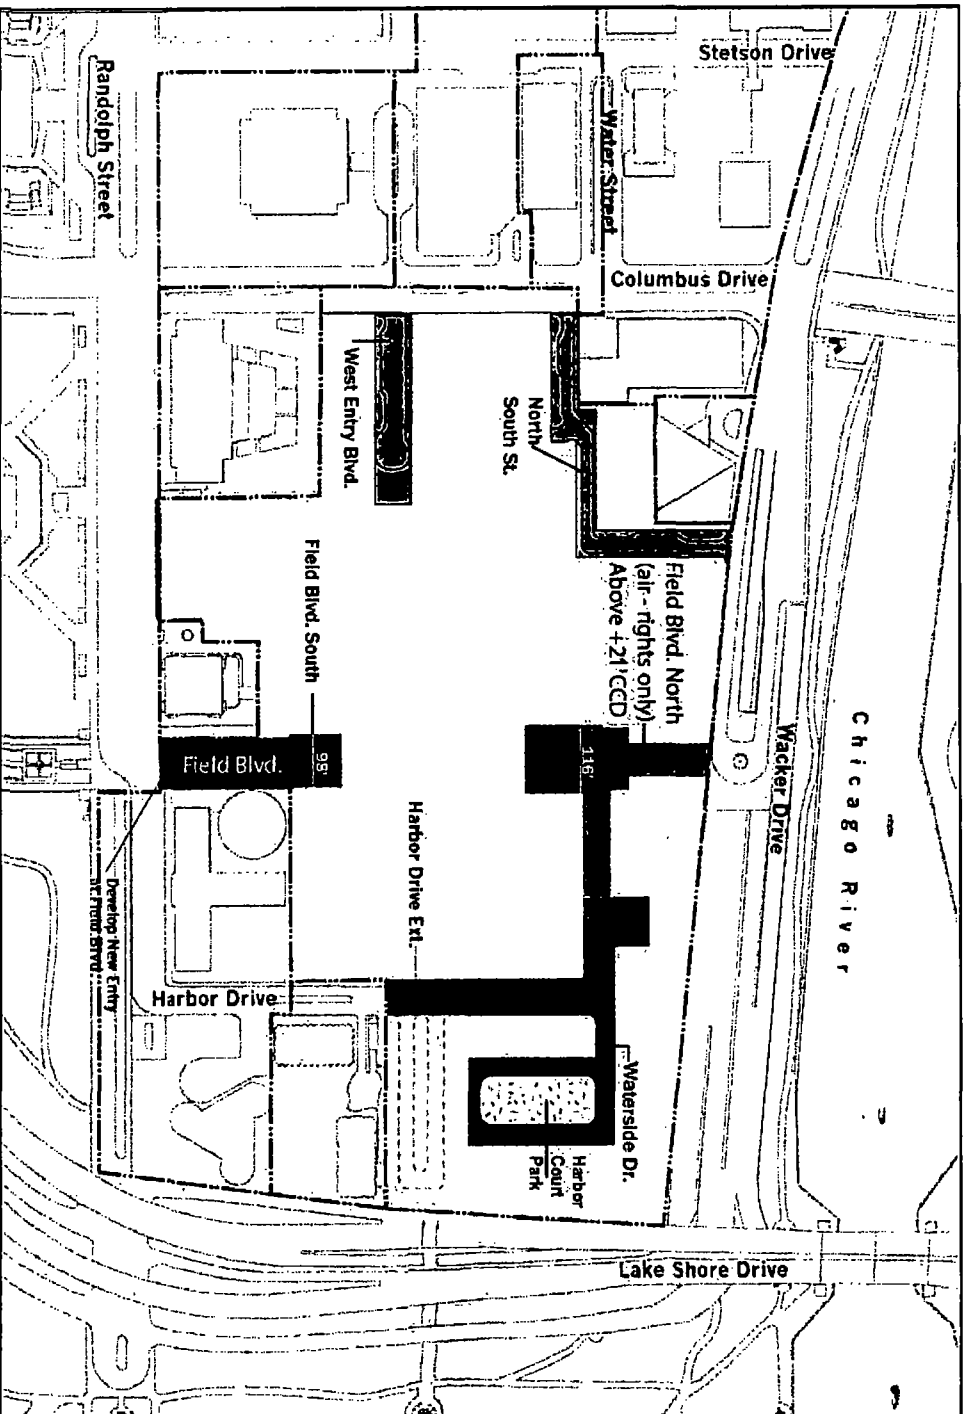

- Provide clear pedestrian links to the Chicago River and Lake Michigan
- Provide convenient access between the upper and lower levels
- Provide handicap access throughout the development
- Extend and connect the Pedway to the park

Emergency Access Easements

- *Emergency Access easements will meet all Chicago Fire Department requirements*

R.O.W. Adjustments - Upper Level

- The upper level is intended to serve local neighborhood traffic only
- Connections to Lakeshore for thru-traffic occurs at the intermediate level
- Access to the Park Drive occurs from a connection to Upper Randolph via a sloped Field Boulevard.

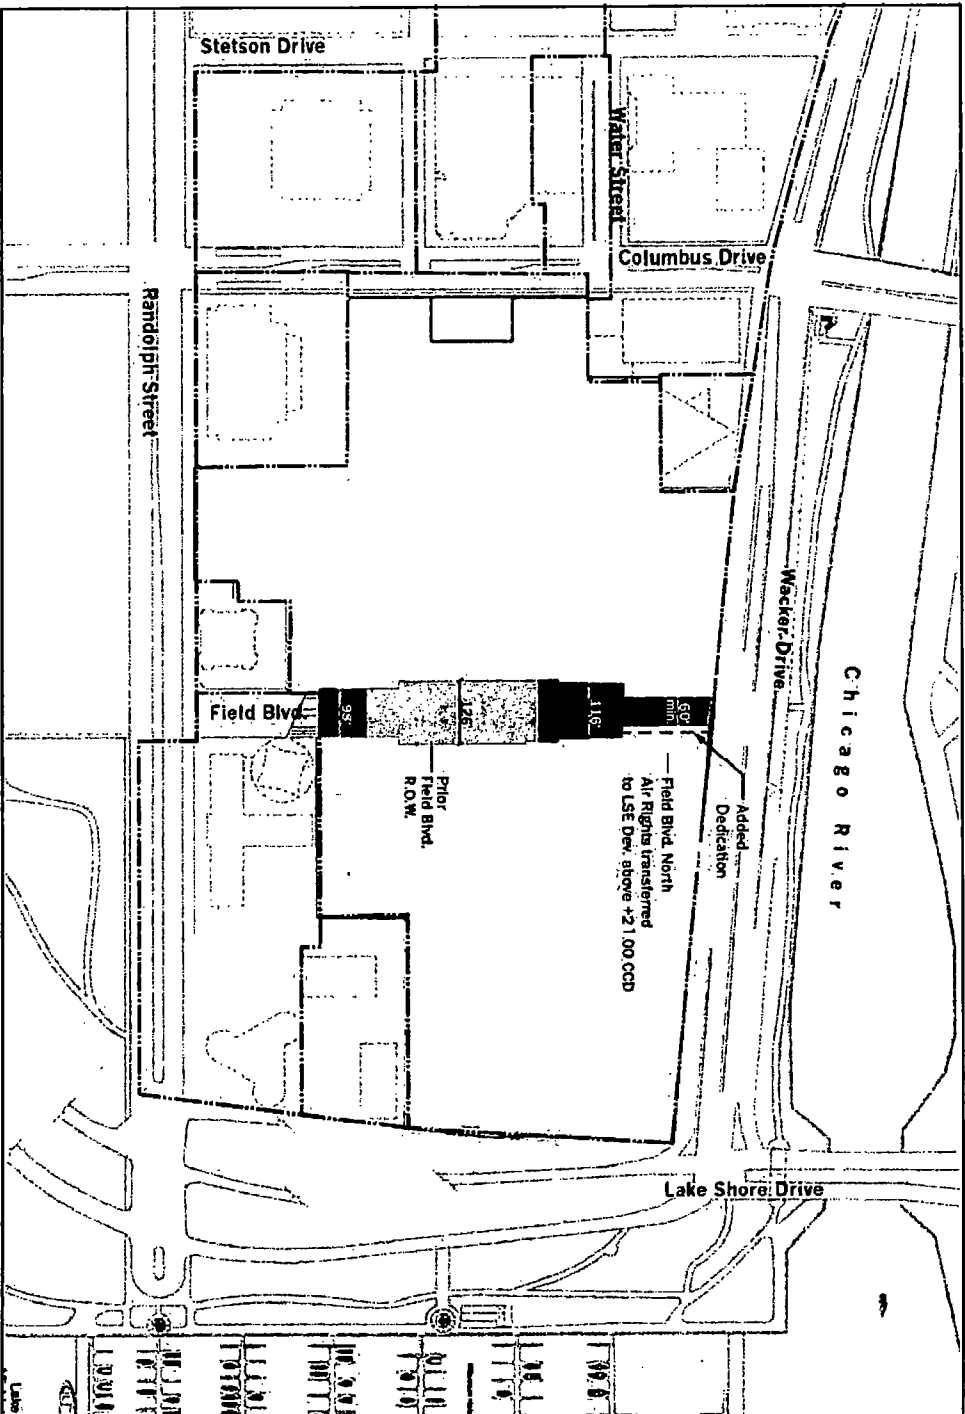

Note: Refer to Street Criteria Drawings for new R.O.W. dimensions & criteria

NOTE:

1. Various Non-Roadway Portions of Upper Level Right of Ways may contain ventilation grates and structures in order to accommodate Lower Level Uses (e.g., parking garages, public, quasi-public and private utilities, etc.)
2. These plans are diagrammatic in nature. The precise location and dimensions of future roadways will be subject to the approval of the city. The vacation and dedications will be accomplished through separate ordinances.

R.O.W. Adjustments - Intermediate Level

- No new roadway connections to Wacker Drive or Randolph St. are proposed at this level, in order to minimize thru-traffic.

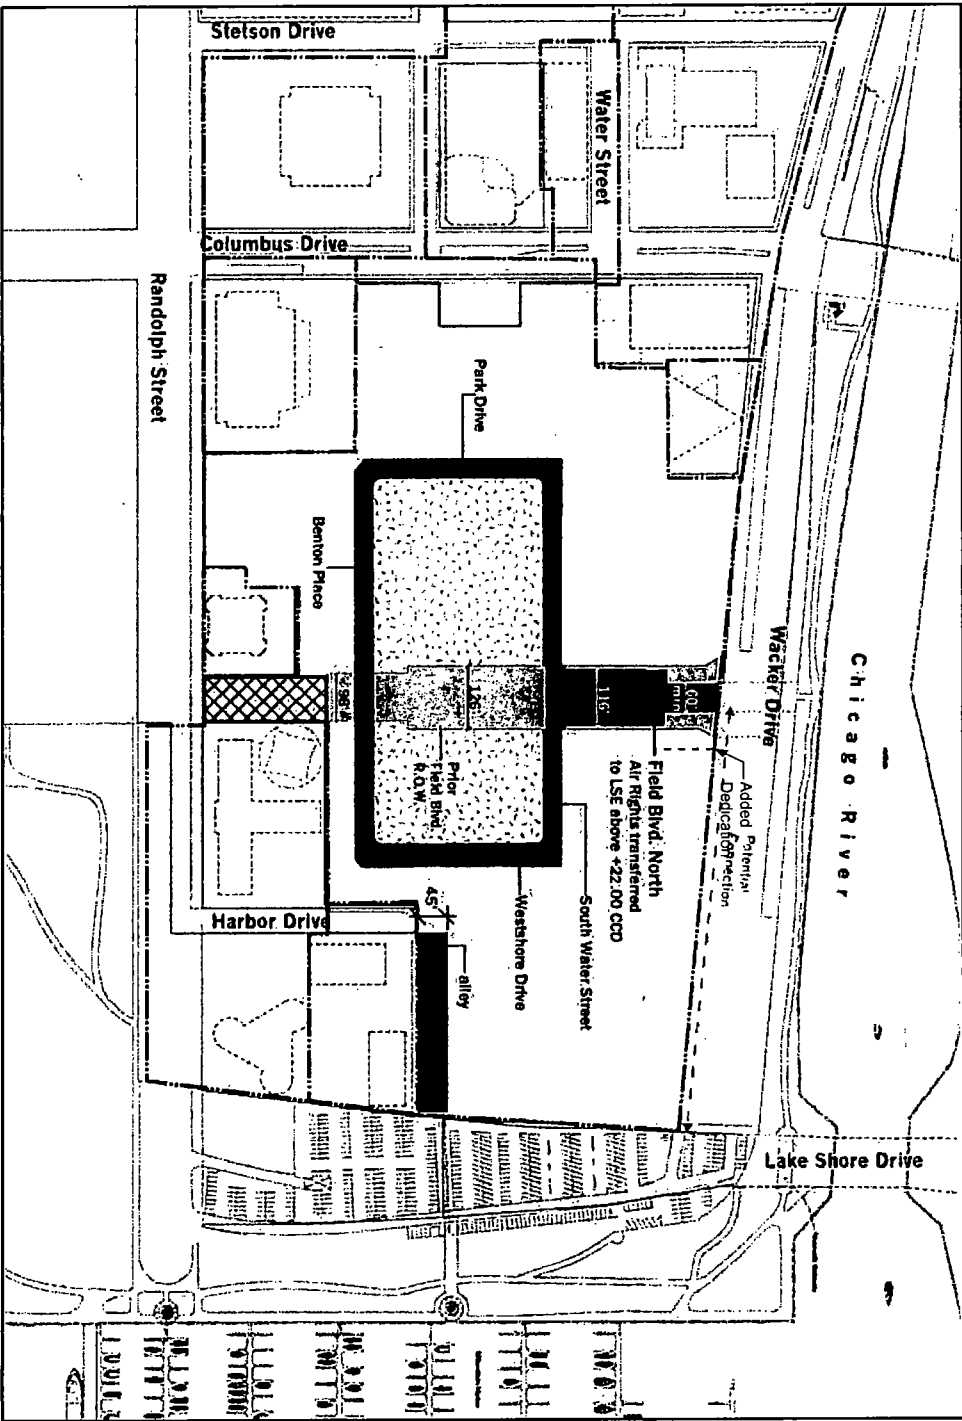

Note: Refer to Street Criteria Drawings for new R.O.W. dimensions & criteria

NOTE: These plans are diagrammatic in nature. The precise location and dimensions of future roadways will be subject to the approval of the city. The vacation and dedications will be accomplished through separate ordinances.

R.O.W. Adjustments - Lower Level

- The Park Drive will ring the neighborhood park with one way through traffic at the lower level
- A connection to Lower Wacker Drive via Field Drive North will allow a second means of access / egress to the lower level

 R.O.W. to be Vacated
 New R.O.W. to be Dedicated
 Existing Dedicated R.O.W. to Remain

Note: Refer to Street Criteria Drawings for new R.O.W. dimensions & criteria

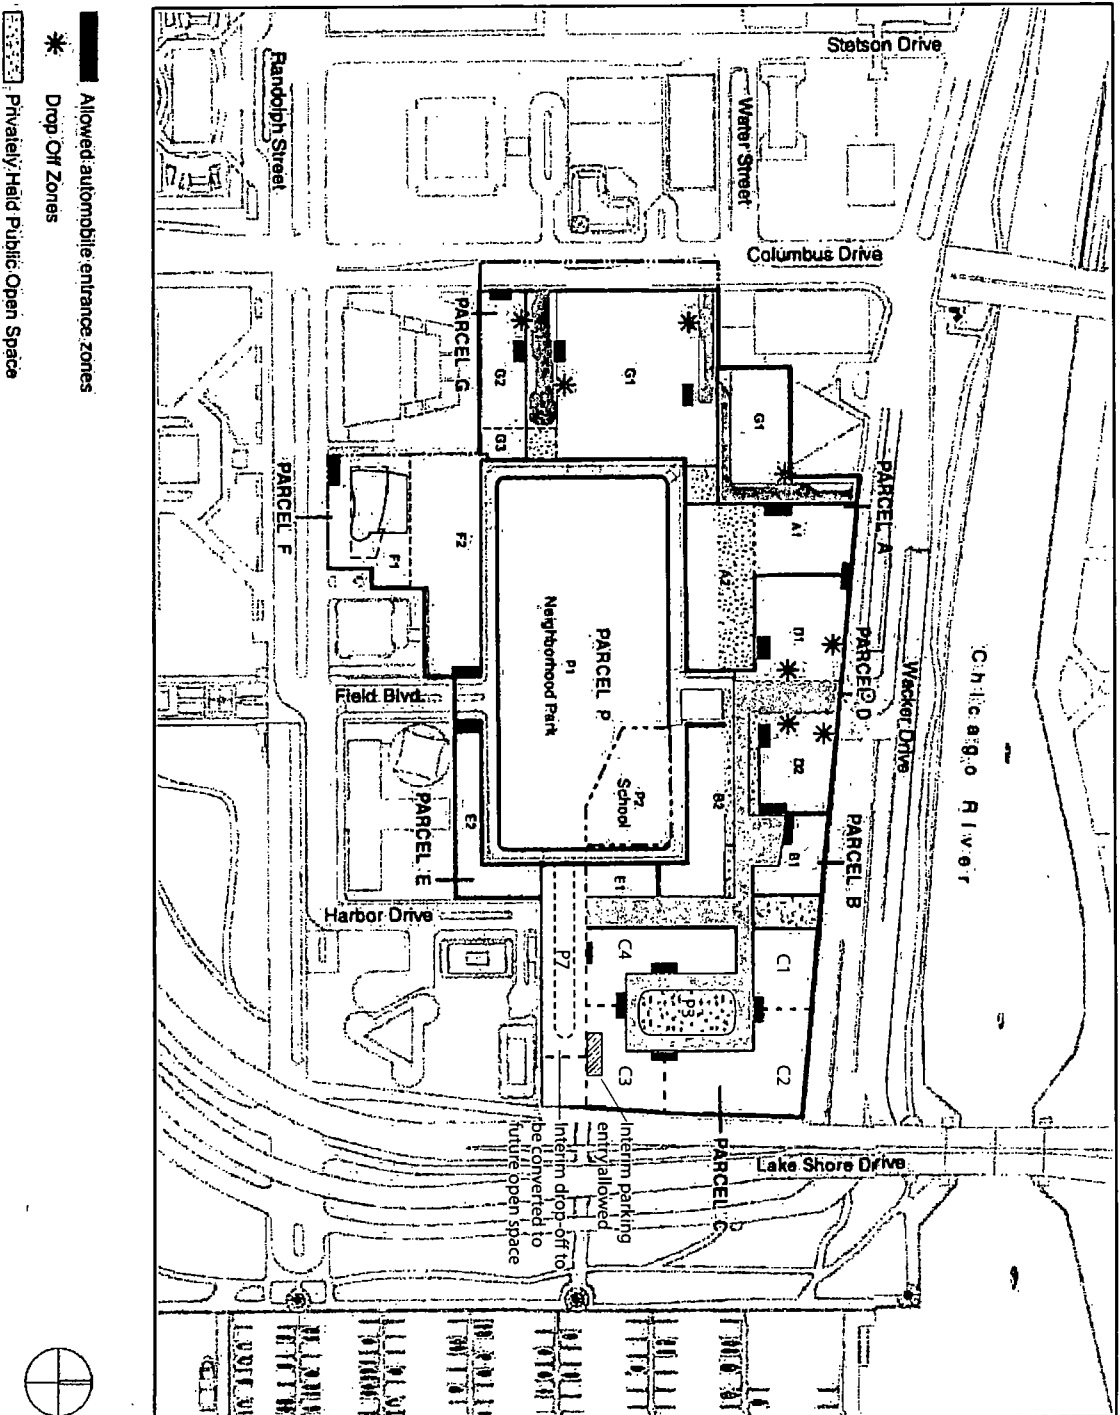

Automobile Drop-Off Zones

- Automobile Drop-off zones at building entries should be conveniently located, yet discreet.

- Curb-side drop-off zones are preferred. Large vehicular turn-around interrupting pedestrian sidewalks should be avoided.

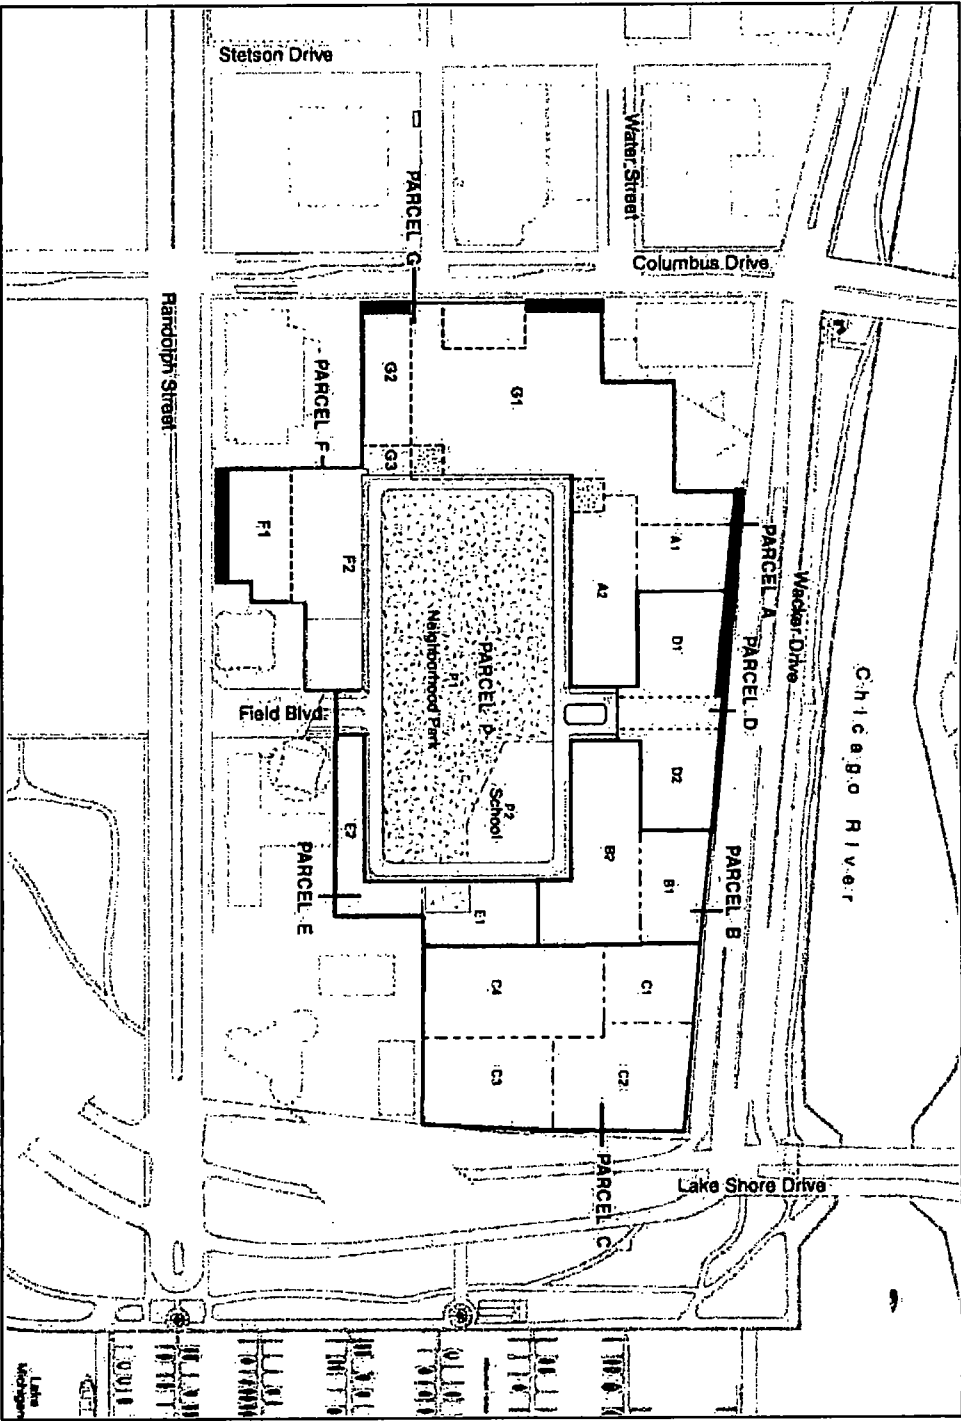

Parking Entries

- Entries to parking garages should be incorporated & integrated into the facade of a building.
- Large uncovered ramps within the sidewalk zone or open spaces should be avoided.
- Where parking access traverses a pedestrian access, the paving material should be consistent w/ the adjacent pedestrian sidewalk paving.

NOTE: These plans are diagrammatic in nature and are only intended to show suggested, not required automobile entrance zones, shore East Master Plan • Chicago, Illinois
Lakeshore East LLC

Intermediate Level

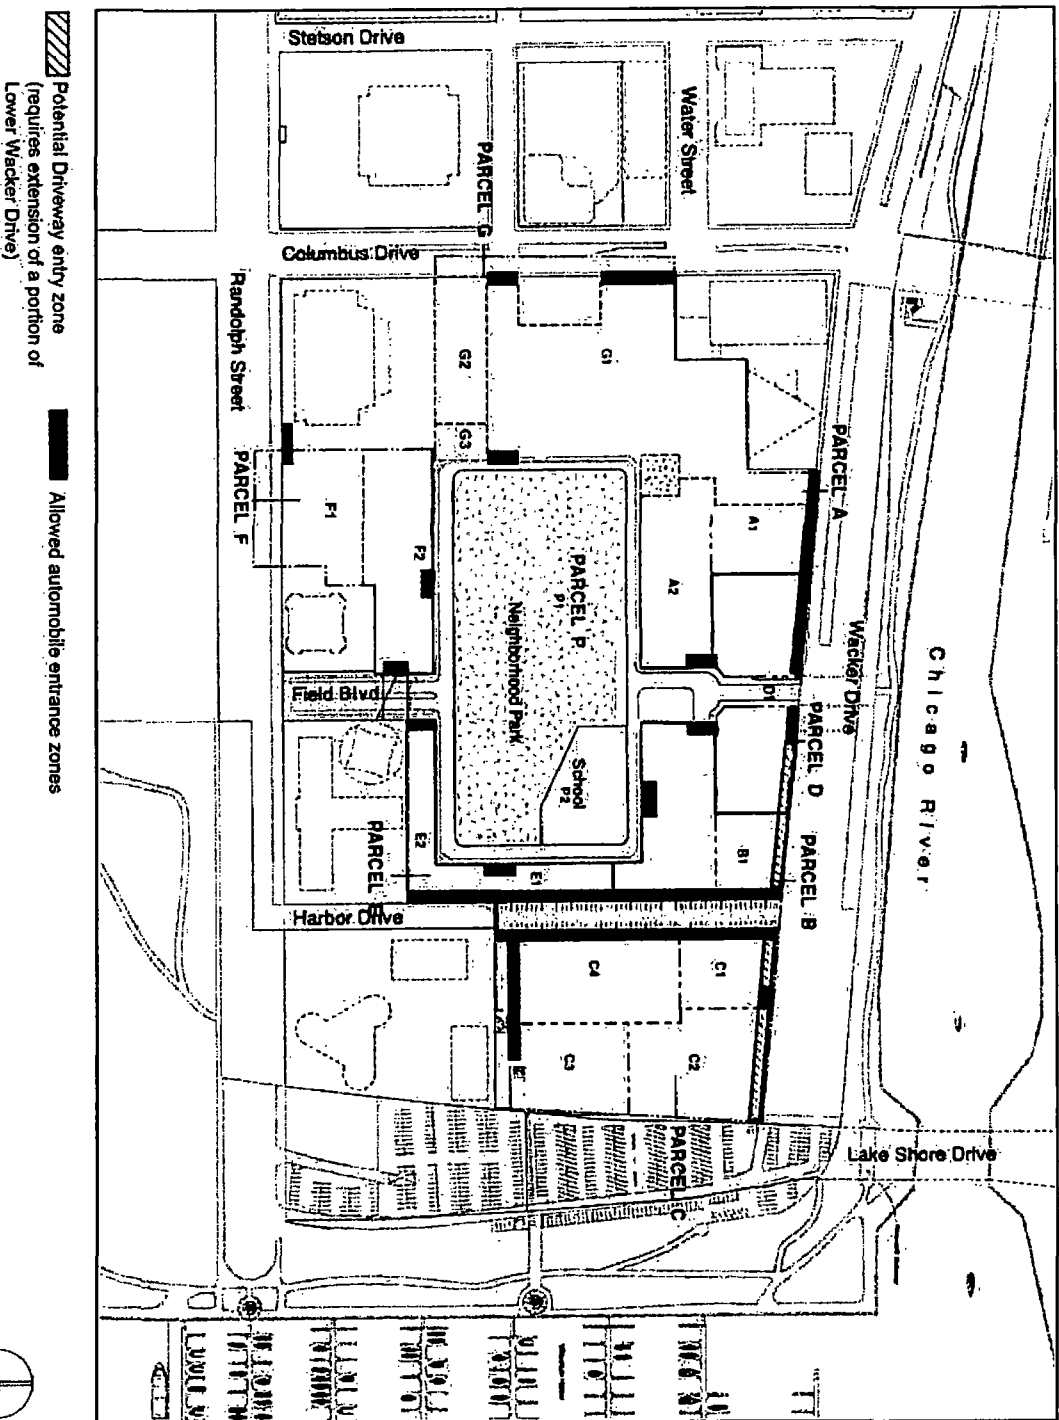

- Allowed automobile entrance zones
- ▨ Privately Held Public Open Space

Automobile Entrance Zones - Lower Level

Service/Vehicular Access

- The lower level is where all service activity will take place. Both access too and from the site will take place on this level.
- Service access can feed off the existing utility easements at this level.

NOTE: These plans are diagrammatic in nature and are only intended to show suggested, not required automobile entrance zones.

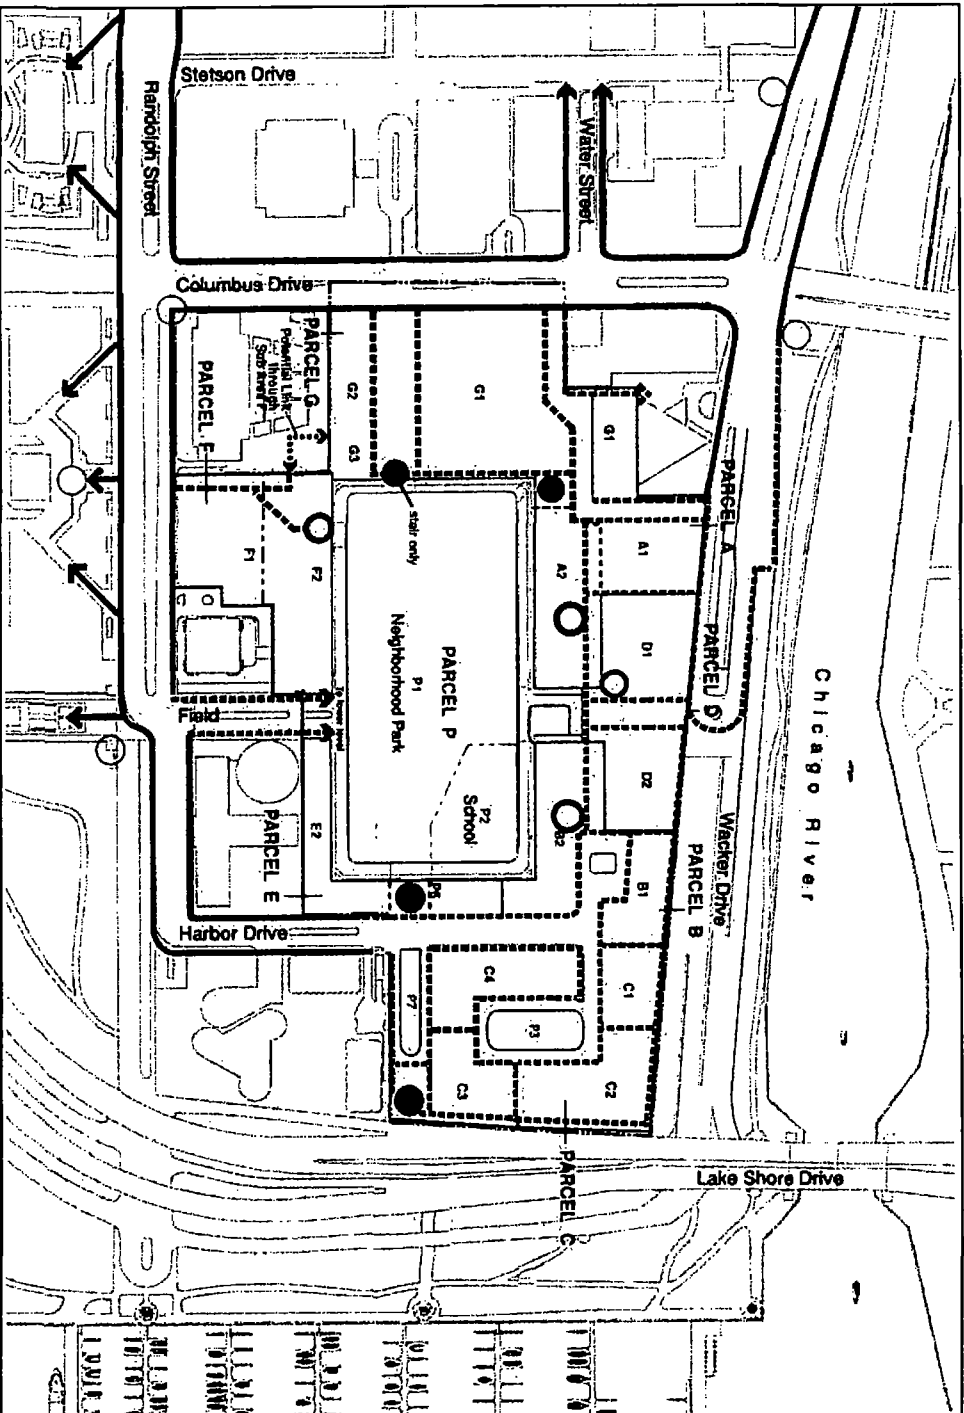

Pedestrian Walkway System - Upper Level

Connections to Grant Park

- Pedestrian Connections will exist on the upper level connecting to existing Grant Park Features such as the Daley Bicentennial Garage, Cancer Survivor's Park, and Millennium Gardens. These connections will adhere to the guidelines of both The City of Chicago Landscape Ordinance, and also those provided by the Chicago Park District.

Vertical Connections

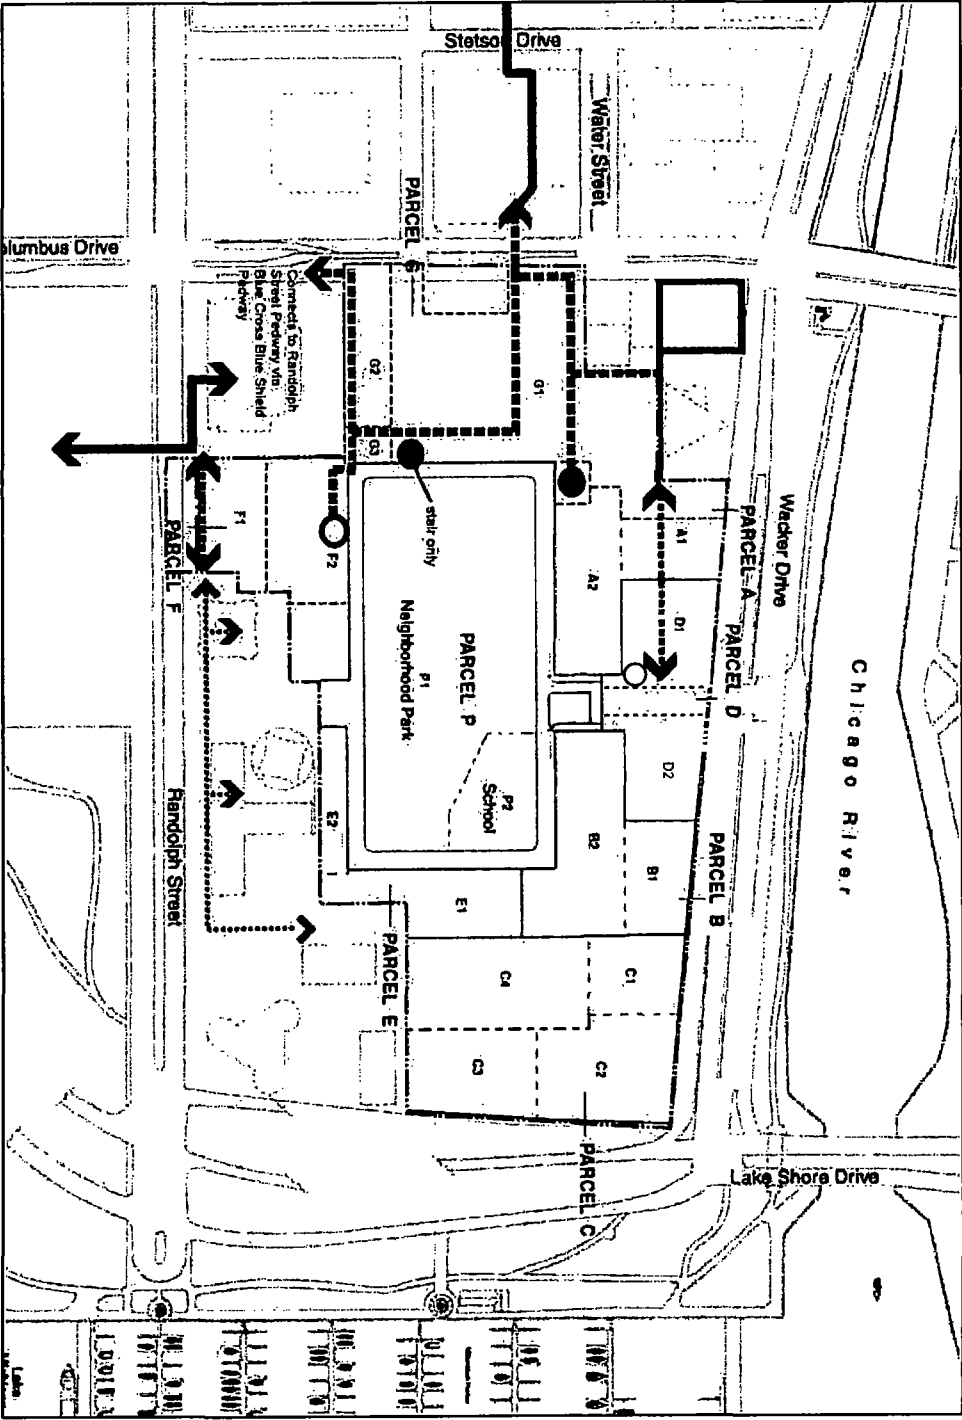

- Vertical connections will also be provided, and will be handicap accessible.
- Private developable spaces may be integrated in and around the vertical connections, as long as public access is maintained to the elevators and/or stairs.

Pedestrian Walkway System - The Pedway System

Connections to existing pedway system

- Within Subarea E, connections to the existing pedway system will be provided to sub-parcels A1, D1, F1, G1 and G2; as shown on the adjacent diagram. In general, the new connections maintain or exceed minimum requirements, and provide a minimum / maximum of 8'-25' walkway widths.
- Within other subarea, potential connections could feed into those proposed for Subarea E.

- Existing
- Pedestrian Connections
- Potential Connections by Others (not part of Lakeshore East or Subarea E)
- Vertical Connection (Subarea E)
- Vertical Connection Within a Building

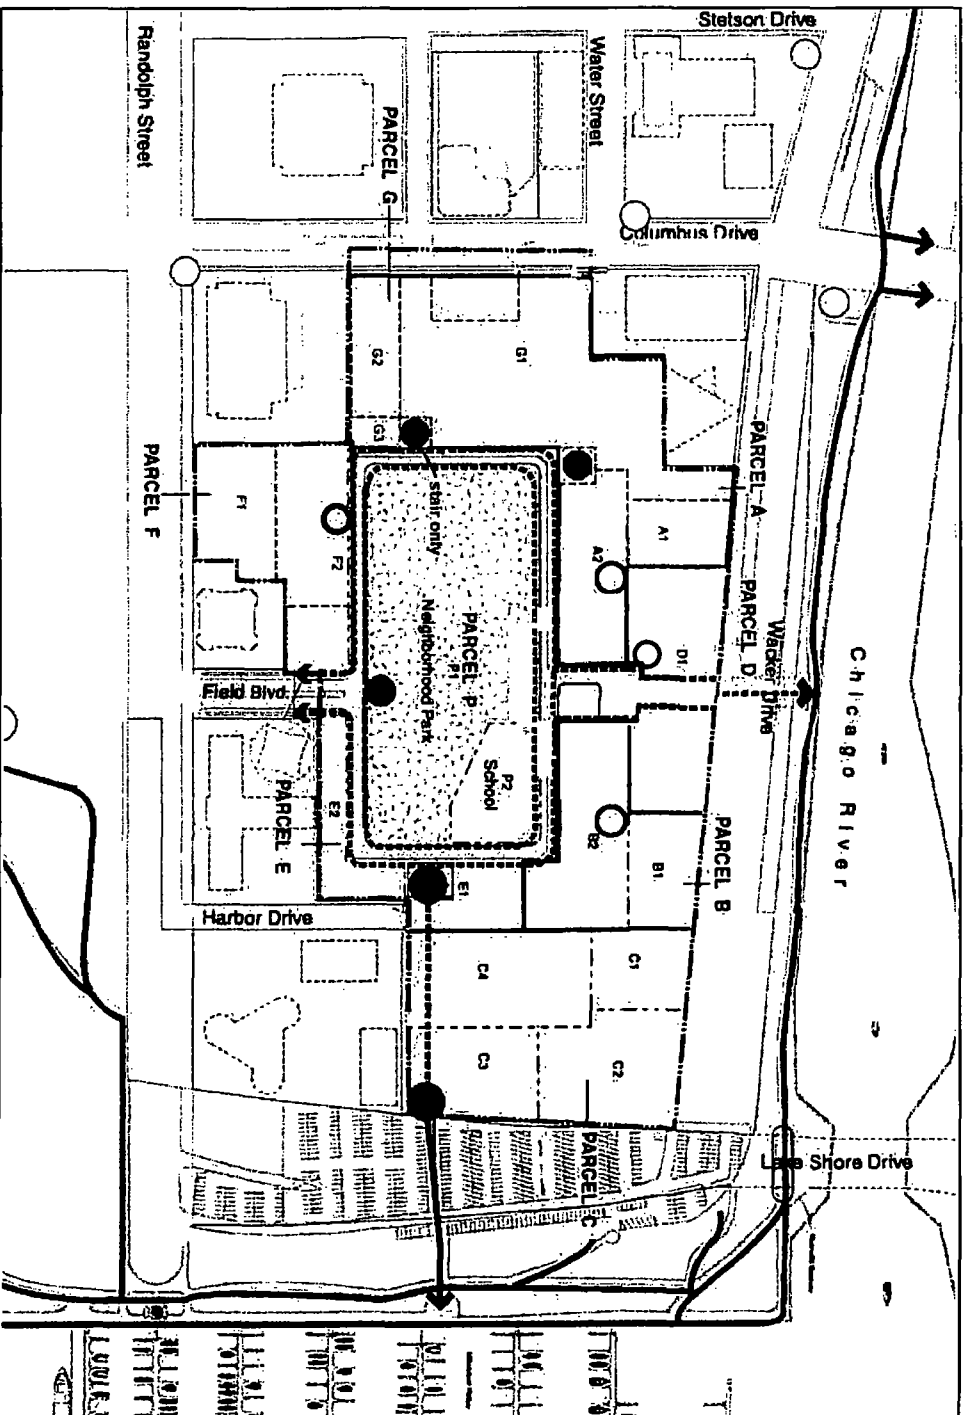

NOTE: This plan is diagrammatic in nature and is intended to show which parcels / sub-parcels should be connected to the parkway system; not the actual route for the connections.

Pedestrian Walkway System - Lower Level

Connections to the River and Lakefront

- Pedestrian Connections will be provided to both the lakefront and river at the lower level. These connections will be coordinated with The Chicago Park District.
- The character of the connections to the river and lakefront should be pedestrian friendly. Ornamental pedestrian fixtures should be provided. Adequate lighting levels for safety should also be provided. A safe marked zone for pedestrians should be created.
- Parking and sound should be screened from view of these pedestrian corridors to the greatest extent possible.
- Long large walls at the proposed underground pedestrian connection to the Lake and River should provide openings to active spaces when possible or be well-lit with articulated architectural details and potentially public art displays such as the existing Riverwalk Gateway at the southwest corner of the River and the Lake.

NOTE: This plan is diagrammatic in nature and is intended to show which parcels / sub-parcels should be connected to the parkway system; not the actual route for the connections:

VERTICAL CONNECTIONS: Private Developable spaces may be integrated in and around the vertical connections, as long as public access is maintained to the elevators and/or stairs.

Introduction

The open space of Lakeshore East is defined by a series of green spaces including a large urban neighborhood park. The neighborhood park area will be approximately 6 acres in its size. Overall the Lakeshore East site will contain approximately 12 acres of publicly accessible open space which includes courtyards, pedestrian promenades, and landscaped setbacks.

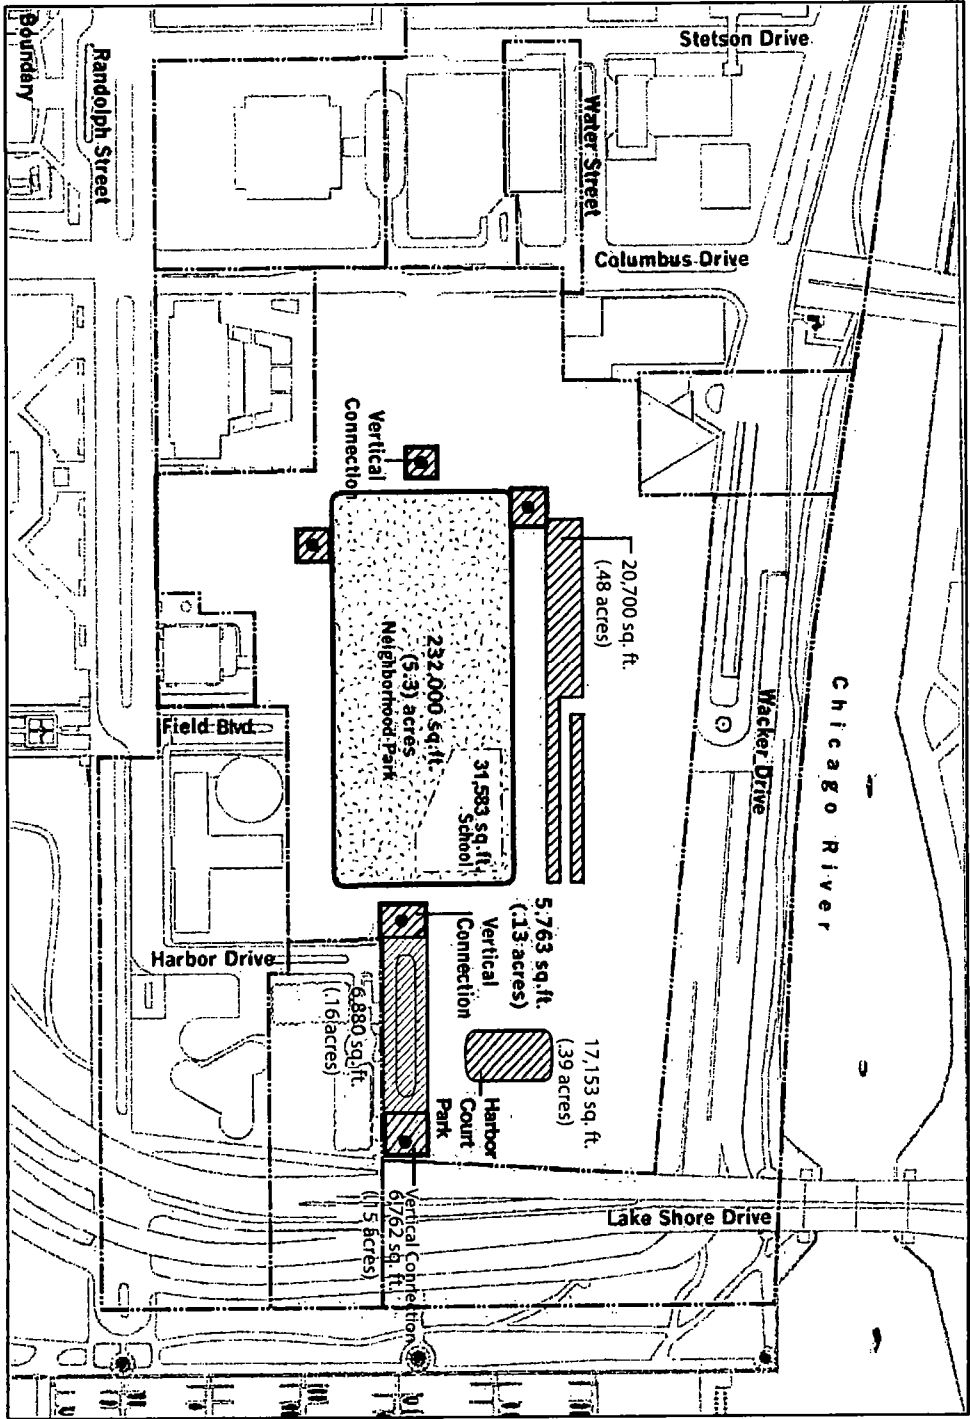

Connections to the river and the lakefront will be provided as links to the great open space of the city. A strong connection to Grant Park via Field Blvd will also be provided

The neighborhood character of the park will be an amenity for both future and existing residents. It will essentially be located at the lower level on grade creating a neighborhood open space where trees and landscaping can flourish

In conjunction with the neighborhood park there will be courtyards, and open space buffers which will enhance and link the surrounding open space amenities. Interior green spaces or courtyards will serve as open space amenities for both new and existing residents.

Roof top gardens are strongly encouraged to be created on various buildings. These gardens will provide a landscaped aesthetic while also enhancing the environmental aspects of the buildings.

Linear pedestrian promenades will be landscaped with trees, flowering planters and paved sidewalks. These pedestrian streets will act as promenades that connect the east and west edges of the site, but will also provide emergency vehicular access to future developments

NOTE: These plans are diagrammatic in nature and they indicate the approximate location and intent of the school location, the spaces to be dedicated as public parks and the vertical connections, but not the precise locations.

The Open Space Framework for Lake Shore East consists of a variety of parks, promenades and courtyards.

NOTE: These plans are diagrammatic in nature and they indicate the approximate location and the intent of the vertical connection, not the precise locations.

NEIGHBORHOOD PARK

Preliminary Conceptual Design

A large public park ("The Neighborhood Park") shall be designed and constructed to encourage public use. The Neighborhood Park is intended to function as a public space for outdoor events and provide a gathering space for the surrounding office, hotel and residential neighborhood.

Neighborhood Park Scale & Character

The park should generally function as a passive neighborhood open space. Large permanent active athletic uses, with the exception of the multi purpose open space in the center of the park, should be avoided. The park should be designed and scaled appropriately for neighborhood use as opposed to a regional attraction.

Park Perimeter / Entries

The perimeter of the Neighborhood Park shall be designed to define the park as a public space and will offer sidewalks, seat furniture, lighting and terraces for gathering. A wide landscaped parkway planted with large canopy trees and a continuous 6' wide pedestrian sidewalk should complete the Park Drive streetscape and define the edge of the park.

Access to the park shall be directed to and controlled at key locations through (the use of identifiable entry areas. An entry overlook terrace shall be created at the south end of the park near the Field Blvd. intersection to provide a panoramic view of the park. A public stairway and handiicap accessible ramp shall be provided at this location.

The eastern and western entries to the park shall be aligned with the vertical connections in parcels E and G.

Pedestrian crosswalks along the Park Drive should be coordinated with these entries and the flow of traffic.

Preliminary Neighborhood Park Concept
(For Illustrative Purposes Only)

The Office of James B.

Park Programming Zones

The park shall include a centrally located, large, gently sloping open green space to be used for both active and passive uses.

A secured play area shall be provided adjacent to the future school, and offer a variety of play opportunities for several age groups. The play area should also be located adjacent to the open green. The approved park design shall be completed within the first phase of development. The playground shall be placed within the park in a location where it will not be impacted by future school construction.

A centrally located dog park may be provided. The inclusion of a dog park will alleviate the requirement to install individual dog run/fragilities in the individual residential buildings.

A future school zone at the northeast corner of the park shall be designated. Prior to construction of the school, this area shall be designed and built to similar open space standards as the rest of the park for interim open space use. The future school will share space for Chicago Park District facilities.

Topography

The park shall generally slope front el. +6.00 CCD on the north up to e1. +30-00 CCD to the south. The park topography should transition smoothly to the various sloped roadways at the perimeter of the park. Large retaining walls at the perimeter of the park more than 3' high should be avoided.

Park Programming Zones

The Office of James Burnett

PRELIMINARY LANDSCAPE GUIDELINES

The design of the park will be coordinated with the City of Chicago. The Chicago Park District, and the community. The following preliminary landscape guidelines indicate minimum standards for landscape materials.

The design and quality of Landscape Materials within all publicly accessible neighborhood open space areas must be executed with these same minimum standards.

Paving

The location of sidewalks and their particular treatment will be determined by the intended use and the overall nature of pedestrian spaces. Park pathways shall be ADA accessible. Typical sidewalks shall use more basic materials such as concrete. Areas such as the linear promenades, entry ways for residential townhomes/towers, and other special pedestrian walkways could utilize higher quality materials.

Paving materials for pedestrian paths may include, yet are not limited to, the following concrete, colored concrete, concrete unit pavers, brick, stone pavers, decomposed granite

Landscaping

The landscape is intended to enhance the site by providing flourishing species of diverse vegetation, while also promoting the use of indigenous plant materials. Ornamental planting should be used for local points, small courts or special areas within the park.

The planting specifications for new landscaping should be consistent with the City of Chicago Landscape Ordinance. The following is a brief summary of some additional guidelines for plantings:

Lawn Areas
Active and passive lawn areas will incorporate sod. Ornamental prairie grass or meadows may be used as ornamental beds.

Existing Trees
To the greatest extent possible, the existing trees designated as desirable species shall be protected, maintained and/or relocated into the neighborhood park or other future open space areas.

New Trees
The following minimum guidelines for tree sizes (at time of installation) shall be followed:

- 1) Minimum root ball sizes for trees
 - shall conform to ANLA Standards
- 2) Specimen tree size
 - a) Minimum caliper : 6 inches
 - b) Height range : 20' to 30' feet
- 3) Shade tree size
 - a) Minimum caliper : 3 1/2 -4 inches
 - b) Height range : 18' 10' 25' feet
- 4) Small upright/ornamental tree size
 - a) Minimum caliper : 2.7/2 inches
 - b) Height range : 6' 10' 12' feet

Shrubs and Other Plantings

These minimum guidelines for the following miscellaneous plant types shall be followed

- 1) Shrubs:
 - a) Minimum container size : 5 gallon
 - b) Height range : 1 1/2 to 3 feet minimum

- 2) Vines, trailing ground cover or trailing perennials
 - a) Minimum container size : 1 gallon.
 - b) Minimum number of runners: 4.
 - c) 8 inches minimum length of runners.
- 3) Clump ground covers or clump perennials
 - a) Minimum container size: 1/2 gallon
 - b) crown and roots shall be well developed within container
- 4) Annuals:
 - a) Minimum container size: 2-1/2 inch pots
 - b) Height range: vines with annual type
 - c) Full crown with healthy, vigorous flowers

Landscape Irrigation System

A landscape irrigation system will be provided in all necessary areas for the general maintenance, and up keep of vegetation.

Water Features

If water features are to be created in the park, they should be compatible with their setting. For example, smaller, more intimate fountains may help to create a serene space. Larger, more active and participatory fountains can help to draw large gatherings of people and provide a focal point for a larger setting.

The technical design of a potential water feature should incorporate the necessary equipment (i.e. filter, pumps, nozzles, etc.) required for efficient use and desired aesthetic effect. Public safety, wintertime use, and maintenance should also be carefully considered in the design of water features in the park.

Fences

If utilized, fencing in the park shall provide for safety only. Fencing should not hinder public access through the site.

Fencing should be ornamental in its nature in order to enhance the overall aesthetic setting of the park. High quality materials such as ornamental metal, black in color, should be used for fencing. Fencing shall be limited to a maximum height of 48"

Playground Equipment

Playground equipment will be furnished with the latest materials and safety surface to ensure both durability and safety. The equipment should be designed to accommodate a variety of users and age ranges. Playground equipment shall meet ADA requirements.

Park Furnishings

Site furnishings will be supplied where applicable. Furnishings may utilize a number of materials which could include steel, stone, wood, etc..

The design and selection of the Neighborhood Park furnishings including, but not limited to, lighting, benches, bike racks, and trash receptacles shall be coordinated and approved by the City of Chicago and The Chicago Park District.

Structures

Structures within the park setting should be simple, small in scale and in character with the park setting. Small structures such as arbors, pergolas, gazebos, may help to enhance the pedestrian realm and provide shade, a place to rest and create a sense of place.

Park Lighting

Park lighting shall be provided and should incorporate pedestrian friendly ornamental fixtures placed along the park paths. The fixtures shall be spaced at a comfortable distance in order to provide adequate lighting for safety at night.

PARCEL C PARK

The Parcel C Park shall be an open space centrally located within the future residential area on the east side of the development Enclosed by the Harbor Court drop off, safe and convenient pedestrian access shall be provided from all Parcel C buildings to the internal park

The park should feature a common green to be used for both active and passive uses. The park should provide walking paths, special paving, seating, and lighting in addition to special ornamental planting. A small children's playground could also be provided in this open space.

PARCEL C LINEAR PARK

The Linear Park connects pedestrians from the extension of Harbor Drive to the lakefront. This space also provides automobile and emergency access to the two southern residential buildings in Parcel C.

This linear green space shall be designed to create a pedestrian friendly environment. The sidewalks shall be designed with canopy trees, special plantings, lighting, and special paving surfaces. The median should be planted with canopy trees, shrubs, ground cover, and perennials.

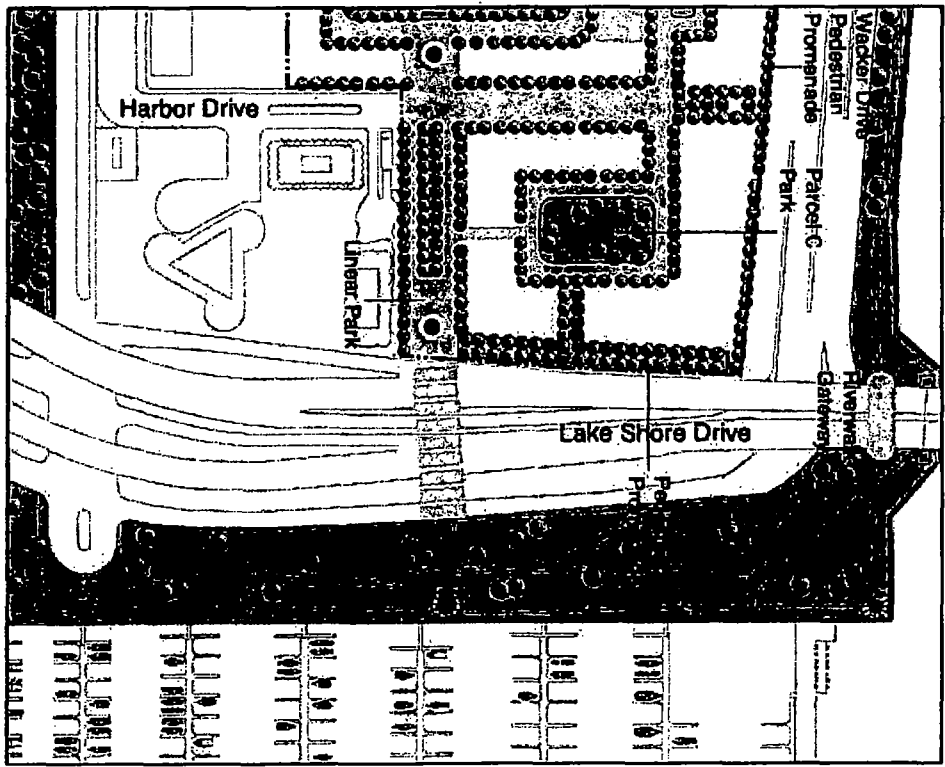

An interim driveway/drop off may be provided (if required) for access for buildings on Parcel C3 and C4. Once the entire Parcel C development is completed, and the internal Harbor Court drop off is operating, this space shall be converted into permanent open space. However, emergency vehicular access through this space, connected to Harbor Court, must be maintained.

At the eastern edge of this space, a stairway and elevator shall be provided for pedestrians to connect to the existing walkway under Lake Shore Drive, connecting Lakeshore East to the lakefront and DuSable Harbor. (See page 5.8 further landscape standards for this vertical connection)

PARCEL C LAKESHORE DRIVE PROMENADE

This linear green space shall be designed to provide a publicly accessible pedestrian promenade along the eastern edge of the development. This 40' wide (minimum) promenade shall be designed with canopy trees, special plantings, lighting, and special paving surfaces

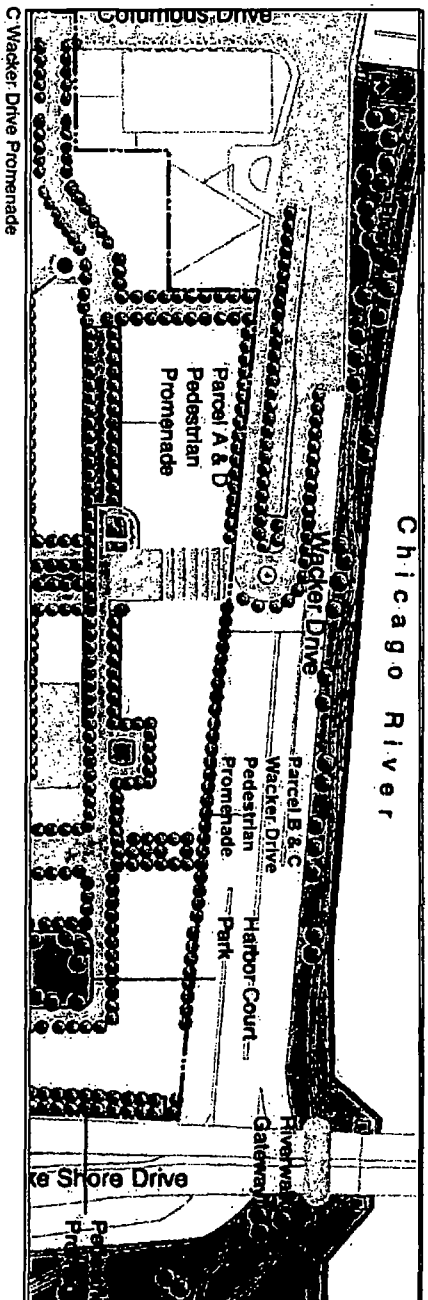

Special consideration must be given to its relationship to take Shore Drive. Its location may be at or above the elevation of Lake Shore Drive. Parking podiums must be screened from view through the use of architectural or landscaped elements.

PARCEL B & C WACKER DRIVE PROMENADE

This linear green space shall be designed to provide a publicly accessible pedestrian promenade along the northern edge of the development at the upper level. This 20' wide (minimum) walkway shall be designed with canopy trees, special plantings, lighting, and special paving surfaces.

Opportunities for sidewalk cafes and terrace overlooks should be encouraged and integrated into the promenade design.

C Wacker Drive Promenade

PARCEL A & D PROMENADE

A linear green space shall be designed to provide a publicly accessible pedestrian promenade between the buildings fronting Upper Wacker Drive & the Park Drive. This promenade shall lead to a pedestrian bridge spanning Field Blvd. North. Both the promenade & pedestrian bridge shall provide an important secondary east west connection at the upper level through the future development. The pedestrian walk shall be a minimum of 17' wide and designed to accommodate emergency vehicular access.

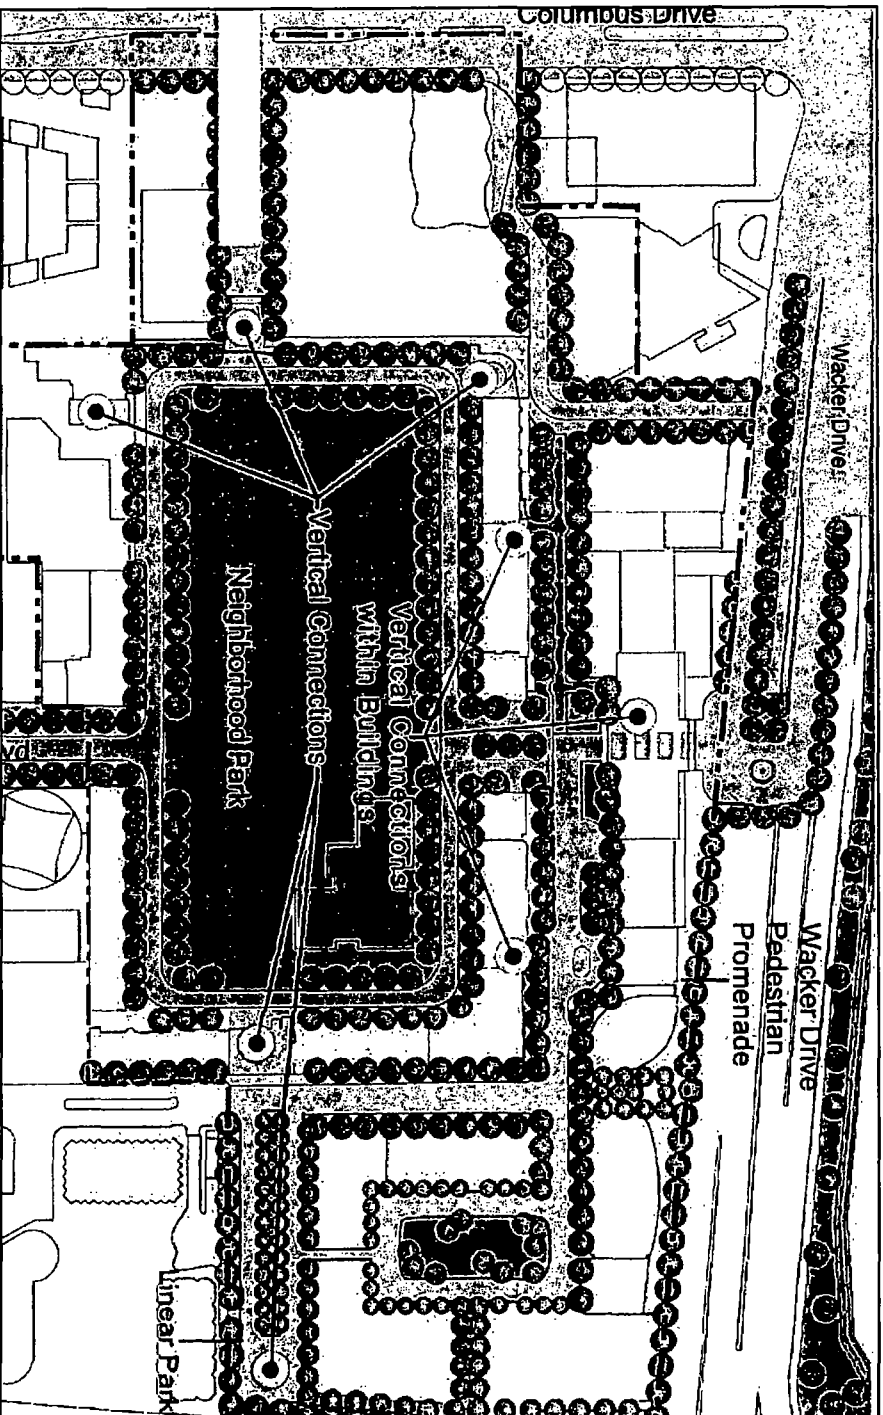

Parcel A & D Promenade

VERTICAL CONNECTIONS

A minimum of 4 vertical connections shall be created to connect upper level development with the park ring roads. As previously mentioned, one additional connection must be included in Parcel C along Lake Shore Drive. These connections must include stairways and elevators as is feasible.

Placed at each edge of the Neighborhood Park, these connections will ensure views into the park from the surrounding areas. These connections must provide attractive and convenient pedestrian friendly access between the upper and lower levels of the district. The design of the stairways shall complement the Neighborhood Park and streetscape design through the use of special paving, lighting, hand rails and planters. These connections shall be treated as landscape features incorporating plantings to help soften this connection between levels.

6.0 Design Standards

- Introduction
- Development Review Process
- Controls for Development
- Parcel Design Criteria
- Building Design Criteria
- Building Materials
- Environmental Considerations

Introduction

The Design Standards included as part of the Lakeshore East Planned Development submittal are intended to ensure that the basic Lakeshore East Master Plan concepts are realized. These Master Plan Concepts include:

- Create urban street walls that support a diverse pedestrian experience.
- Create an enhanced pedestrian environment that physically and visually connects activities within existing and future buildings to adjacent public areas.
- Preserve views from existing development through new development to the greatest extent possible. Establish view corridors for new development.
- Create a distinctive skyline.

The following standards describe specific design intentions which should be used by the designers, developers and city agencies involved in the building of Lakeshore East.

Development Review Process

The Design Standards are intended to establish a self-policing structure for evaluation of projects which shall be submitted to the Department of Planning and Development for approval, prior to submission to the City for building permit.

The developer shall establish a Lakeshore East Design Review Committee for internal review of all development proposals for conformance with the Master Plan. All design submissions should include detailed site plans, building plans, elevations, material samples, and information on lighting and signage. The Design Review Committee may also request additional project information including models or three dimensional renderings.

Any modifications to the Master Plan or Design Standards will require discussion with the City of Chicago Department of Planning and Development and a consensus that the changes do not negatively impact the intent of the Master Plan. Any modifications deemed significant will require an update to the Master Plan & Partial PD Amendment.

Controls for Development
/ Parcel Design Criteria

Controls for Development

The Lakeshore East Master Plan establishes seven development parcels organized around a neighborhood park. The parcels have been defined to accommodate the projected long term build-out. The parcels have also been divided into sub-parcels to permit flexibility in responding to specific development proposals. The sub-parcel divisions may adjust slightly in order to accommodate building design refinements over time.

For the purpose of calculating maximum developable F.A.R. area, only the inhabitable area at or above the building entry shall be included.

Parcel Design Criteria

Pedestrian Access
A well-connected pedestrian network is critical to successfully creating an urban neighborhood in Chicago. The maximum allowable distance between two pedestrian walkways along a single blockface should not exceed the length of a typical downtown Chicago block or approximately 320'. Midblock pedestrian walkways which pass through development parcels are also encouraged.

Vehicular Access

The multi-level plan of Lakeshore East should accommodate the bulk of parking and service below grade. Curb cuts should be kept to a minimum and the use of shared curb cuts along shared property lines is encouraged. Curb cuts should not exceed 20 feet in width. Parking entries should be integrated with the building's architecture through the use of similar materials, patterns, textures and color. All parking above the street level must be screened with occupied space.

Service access is permitted at the lower level only.

Emergency Vehicle Access

Required emergency vehicle access easements are identified on the parcel diagrams.

Interim Uses

Undeveloped parcels may support interim uses such as open space, construction staging areas

and surface parking. Interim use plans will be reviewed by the Department of Planning and Development. They should identify all temporary improvements and timeframe of interim use.

Utility Easements

Utility easement corridors, varying in width and Dedicated and Conveyed to the City of Chicago below approximately +20.92 C.C.D., currently exist throughout the site. As future development fills in the site, the existing utility corridors will generally occur at the lowest level of the parking structure. A service roadway, generally at elevation +6 C.C.D., will typically occur along the easements and intermittent structural columns/caissons for the structures above may fall within the easement corridors. The placing of structural easements within existing easements must be coordinated with existing and future utilities.

These utility easement corridors must be accessible to all utility entities, and will also have controlled accessibility to building service vehicles and to adjacent parking structures.

Existing utilities, will either remain in place, or be relocated into the new, final utility corridors. New utilities will also occur within the new dedicated roadways on grade throughout the site.

The building envelope controls have been created in a way to allow some design flexibility within each sub-parcel. Also, the Department of Planning and Development may administratively allow minor modifications or adjustments to the building envelope controls.

Maximum Developable F.A.R.

Within Subarea E, a maximum developable area has been established. This maximum developable area will not fill the entire allowable building envelopes, but may be shifted from one parcel to another parcel as long as the maximum building envelopes are maintained.

Highrise Building Zones

Highrise Building Design Criteria

Highrises are characterized by their three elements: the building base, the tower and the top. Transition lines should be articulated at the two or three story level lower base, between the base and tower, and between the tower and top. The transition lines may be achieved by a change of material, a setback, a reveal or a cornice line.

Building Base

It is important that the base of the building extend to the sidewalk to define the urban street environment and support a close relationship between activities in each building. Special streetwall standards for the base include:

Setbacks and Building Lines

The building must extend to the defined edge of the sidewalk (specified by property line, easement or setback) for at least 80% of the frontage. The building may setback a maximum of 10 feet for up to 25% of the frontage from the defined edge of sidewalk if the additional setback is designed to include sidewalk cafes, seating, public art, landscaping or other amenities.

Ground Floor Active Building Uses and Transparency

Active uses that are visually connected to the pedestrian environment are encouraged along the ground floor of the building. These active uses may include retail, lobbies or office space. The ground level facade of the building should be transparent to allow viewing into the interior of the building. Blank walls are not encouraged.

Building Envelope

Building mechanical floors may extend beyond the maximum building envelope. Maximum building envelopes are identified for each sub parcel.

Building Tower

Generally, the preferred location for highrise towers should be toward the primary street frontage.

Building Top

A varied and distinctive skyline is desired. The building top should provide special architectural treatment to express building identity. Vertical design elements, such as spires, should be integrated with the design of the building tower and top. The height of a vertical design element may extend above the maximum building height, and is subject to administrative approval by the Department of Planning and Development.

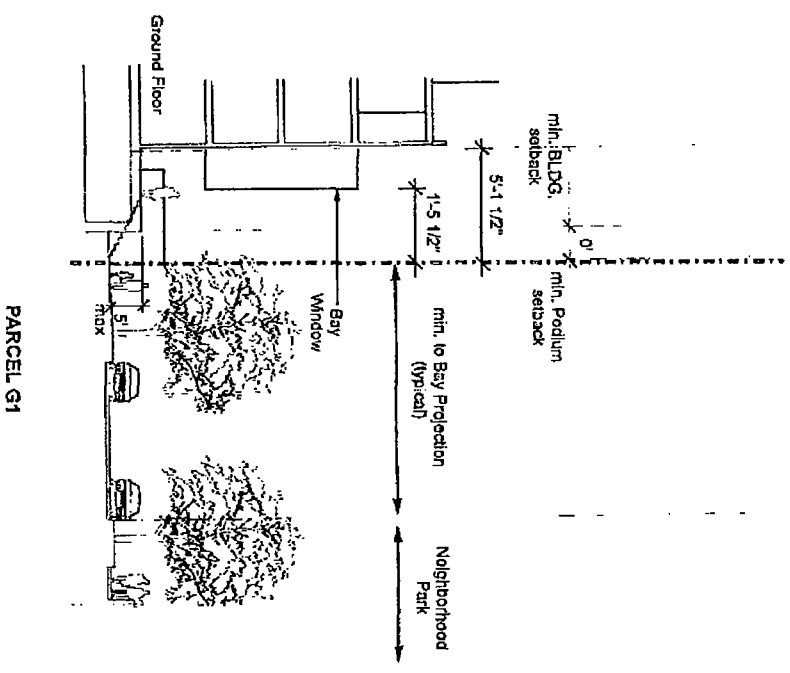

All rooftop mechanical systems including communication devices should be concealed from view within an architectural enclosure

Building Separation

To preserve views, a minimum separation of 40' between non-party walls is required. Building projections, such as balconies or bay windows, may not extend into the minimum building separation.

Building Height

Building height is defined as the vertical distance from the curb level opposite the front of the building to the top of the highest occupied floor of the building. For purposes of identifying occupied spaces, the following areas shall be excluded: mechanical rooms, elevator machine rooms & overruns, rooftop deck access rooms, habitable areas comprising less than 20% of the total room area. Maximum heights, identified in total feet, for the building base, tower and top are identified for each parcel.

Townhouses

It is important that the townhouses create a continuous streetwall that frames the park and special pedestrian ways. It is also important that the townhomes along the Park Drive screen all existing and future podiums from view. Special townhouse standards include:

Setbacks and Building Lines

The design of the townhouse podiums shall include a minimum landscape setback of 5' from the sidewalk (specified by property line, easement or setback) East of Field Blvd. South, along the East / West segment of Park Drive, the minimum podium setback may be 3'. Entry stairs may extend into the landscape setback. Townhouses within a particular grouping along the same street frontage should maintain a similar setback from the side walk & from their podium.

Orientation

Townhouse entries should be oriented to the street. The townhouses should be designed to include living space at the ground floor to ensure "eyes on the street". Stacked townhouses which have two street frontages should address both streets.

Variety

Variety in the use of materials and articulation is encouraged within groupings of townhouses, in order to create an aesthetically diverse neighborhood setting.

Building Height

Building height is defined as the vertical distance from the curb level opposite the front of the building to the highest point of the townhouse roof. If extending beyond the maximum building height, roof top enclosures may not exceed 10% of the rooftop area and should be architecturally integrated with the design of the townhouse roof. Maximum heights for the townhouses are identified for each parcel.

NOTE: These plans are diagrammatic in nature and are only intended to show approximate locations and dimensions.

School Building

The scope of the work for the 45,000 sq. ft elementary school will include the site work required to prepare the site for construction of the proposed building. The developer shall also provide the "core and shell". It will include all cast in place concrete structural steel, steel joists, and roofing. Additionally, it will include complete exterior enclosures with windows, storefront, glass and glazing, exterior masonry, and exterior doors. Finally, it will include all utilities to a location within the building such as a pump room, or mechanical space. The "core and shell" of the building can be further defined by the following specifications sections from the Chicago Public Schools Project Manual dated 1999 / 2000 (a copy of which is on file at the Department of Planning and Development) :

Building Elements

Special consideration will be given to the following building elements during the development review process.

Landscape Roofs

Green roofs, or roofs that are covered with planting, can provide great benefits to the building as well as the urban environment and are encouraged. Green roofs may be used to reduce the building's energy costs and also reduce stormwater runoff.

A majority of the defined green roof area should be covered by vegetation. Public access is not mandatory but maintenance access should be maintained. Future installations, such as mechanical equipment, should not have a negative impact on the landscaped area.

Drought resistant indigenous plants that require minimal maintenance are recommended.

Arcades

Arcades are allowed, but must be continuous along the entire length of the building frontage from one street right of way to the next street. Minimum width is 8 feet clear, maximum width is 20 feet and minimum clear interior height is 14 feet. Arcades shall have a minimum decorative pavement treatment, and landscaping, seating or other public amenities as appropriate. Arcades shall not contain parking spaces, passenger drop-offs, ramps, loading berths or any other vehicular use, or trash storage facilities.

Through Block Pedestrian Connections
Indoor and outdoor through block pedestrian connections are encouraged.

Enclosed Through Block Connections
The connection should provide a continuous unobstructed corridor of at least 20 feet in width and the unobstructed height must be a minimum of 15 feet. Material finishes and lighting should be selected to ensure a pleasant and safe pedestrian connection.

Exterior Through Block Connections
The connection should be a continuous unobstructed space at least 20 feet in width. A minimum clear height of 20 feet is required where the connection is not open to the sky. Building elevations that border the connection should include active building uses where possible or be treated with plantings, murals and other architectural details.

Balconies
Balconies are permitted but must be integrated within the design of the building facade.

Bay Windows
Bay windows are allowed and may extend above a ground level landscape setback but may not extend into the minimum building separation.

Canopies and Awnings
Canopies and awnings are permitted for retail development and building entries. Canopies and awnings should be integrated with the design of the facade. Materials should be high quality and may be either fixed or retractable. They must meet all

applicable City Codes and regulations.

Exhausts
Exhaust vents should not be located on a building's primary street frontage.

Signage
Signage is to be kept to an absolute minimum. The design of signs should be compatible with the building and street frontage. High quality and durable materials are encouraged. Signs should be mounted in locations that respect the design of the building, including arrangements of bays and window openings. Fixtures for externally illuminated signs should be simple and unobtrusive.

Signage at building tops is limited to hotel uses and is subject to administrative review and approval of the Department of Planning and Development. Signage must be integrated with the design of the building.

Building Lighting
Lighting may vary within the Lakeshore East Development. Public spaces should be adequately lit to ensure a safe pedestrian environment. Lighting used to highlight architectural features such as articulated building tops or building entrances is encouraged. Such architectural lighting should be planned to not visually impact adjacent buildings or public spaces.

Radio Antennae
Radio antennae may be allowed on Parcels G and D but must be integrated with the design of the building.

Parking
Parking Entrances
Parking garage entrances should be designed as an integrated element of the building's facade through the use of similar materials and detailing.

Driveways and curb cuts should be compatible in material and detailing with adjacent sidewalks.

Perimeter Walls
All Parking at or above the upper street level must be screened by occupied space. Parking along the lower and intermediate levels may extend to the parcel line; however the parking must be architecturally screened when it is adjacent to a public accessway, such as Intermediate Wacker Drive and Lake Shore Drive. Along Field Blvd. North parking must be screened by occupied space at the lower level, and architecturally screened above the lower level. Along the Park Drive, the townhomes and other residential buildings will screen all existing and future parking podiums from view

Ventilation
Parking garage ventilation should be well designed, with openings which should incorporate architectural screening. Ventilation structures should be designed as integral components of adjacent buildings or open space.

Building Materials

The selection of appropriate building materials should be made with a concern for the existing context.

All Glass curtain-wall buildings are discouraged and highly reflective glass will not be permitted. If all glass-curtain-walls are used, high quality, low-e or clear glass should be used.

Two grades of building material quality, Grade 1 and Grade 2, have been identified in the Master Plan.

- Grade 1
 - Natural Stone
 - Brick
 - Architectural Precast
 - Glass and Metal Curtain Walls
- Grade 2
 - Grade 1 Materials preferred
 - Exposed Structural Concrete allowed
 - with architectural detailing and clean, high quality construction
 - formwork (such as steel forms or plastic faced plywood)

Generally, Grade 1 materials should be used for signature buildings at the perimeter of the site and Grade 2 materials may be used for buildings on the interior of the site. Unique materials and colors are encouraged along the ground level, at building entrances and on the rooftops.

In general, whether Grade 1 or Grade 2 materials are used, a high quality level of finishes and details is important.

Building Bases

Grade 1 materials should be used on the building bases and the townhouses. Clear or lightly tinted glass is preferred. Retail storefronts may include ornamental metals.

Building Towers

The portion of the building above the base should use materials that are compatible with the material used for the base and also be complementary with neighboring buildings. Towers identified as signature buildings should use Grade 1 materials, however, the level of articulation and detailing may be simplified. Towers identified as Grade 2 may use exposed structural concrete clear or slightly tinted glass is preferred. Ornamental metals may be used for building accents.

Building Top

The materials used for the building tops should be of high quality and present a distinctive image for the building.

Material Color

Material colors should minimize differences between adjacent parcels. Predominantly dark buildings are discouraged.

Stone, brick and concrete colors should be light to medium warm neutral colors.

Glass colors may include clear panes or slightly tinted gray, silver, green or blue.

Tower - Grade 1 Materials (where applicable)

Environmentally Conscious Design

The Lake Shore East Development is a significant opportunity to showcase environmentally sensitive design. The following recommendations can be used as a checklist to evaluate and ensure an environmentally sensitive approach to building a neighborhood.

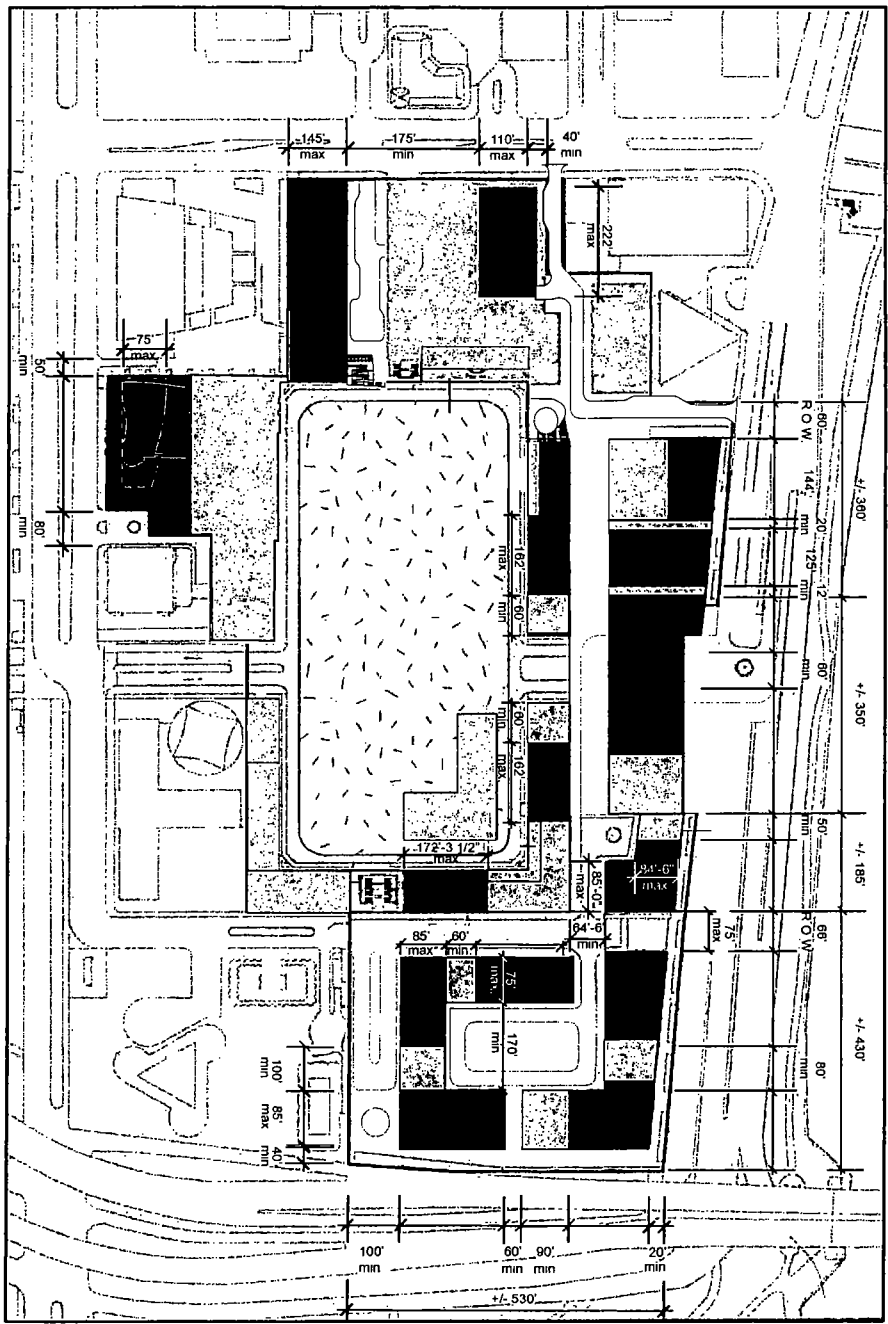

Site Design Recommendations

- Orient buildings to optimize solar exposure.
- Buildings near the Lakefront should reduce the amount of curtain wall in an effort to reduce the injury to migratory birds due to the transparent nature of the facade.
- Utilize indigenous landscape materials, with an appropriate diversity in plant species.
- Properly manage stormwater runoff
- Relocate and reuse existing trees.

Building Design Recommendations

- Coordinate programmed areas that will benefit from sun exposures in appropriate zones within the building.
- Manipulate building envelopes that will respond to climate and orientation.
- Consider the integration of photovoltaic panels and/or fuel cells for electric generation.
- Encourage operable windows that provide fresh air to interior workspaces and living spaces.
- Utilize energy efficient building systems
- Include "landscape roofs."
- Develop exterior and interior shading devices that minimize heat gain.
- Utilize exterior and interior "light shelves" that bring daylight into the interior zones and workspaces of the buildings.
- Minimize the use of hazardous or "off gassing" materials, specifically materials with volatile organic compounds (VOC's).
- Employ wood products harvested from certified forests.
- When possible, select materials based on life-cycling costs
- Develop lighting controls that manage energy consumption including task lighting, daylighting, an energy efficient artificial lighting.
- Coordinate a tenant recycling program with the City of Chicago's recycling program.

Re: Application for Amendment to Residential Business Planned Development No. 70, As Amended 2015

AND

Application for Lake Michigan and Chicago Lakefront Protection Ordinance Approval

Dear Property Owner or Resident:

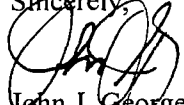

In accordance with the requirements for an Amendment to the Chicago Zoning Ordinance and for an approval under the Lake Michigan and Chicago Lakefront Protection Ordinance, please be informed that on or about June 10, 2015, I, the undersigned attorney, will file an application on behalf of the Applicant, Lakeshore East, LLC, for a change in zoning from Residential Business Planned Development No. 70, As Amended, to Residential Business Planned Development No. 70, As Amended 2015, and for approval under the Chicago Lakefront Protection Ordinance, for the property commonly known as: SEE ATTACHED LIST OF ADDRESSES, Chicago, Illinois and generally bounded by: SEE ATTACHED BOUNDARY DESCRIPTION.

The purpose of the proposed zoning amendment and the proposed Chicago Lakefront Protection Ordinance approval is to allow for a proposed 98-story mixed-use building containing approximately 405 dwelling units and approximately 160 hotel keys, referred to as Wanda Vista Tower. The applications will also allow for the adoption of an updated "Lakeshore East Master Plan & Design Standards 2015" which will be revised to adjust allowed heights on Parcel D and Parcel G2 within Subarea E of Residential Business Planned Development No. 70 As Amended 2015. The maximum height allowed for Parcels D1 and D2 will increase from 640 feet to 1,200 feet and the maximum height allowed for Parcels G2 and G3 will decrease from 900 feet down to 680 feet. The updated "Lakeshore East Master Plan & Design Standards 2015" will also include modifications to the Upper roadway system and will add a connection from Upper Wacker Drive to Waterside Drive via an extension of Upper Field Drive.

The Applicant is Lakeshore East LLC, whose address is 225 North Columbus Ave., Chicago, Illinois.

I am the attorney for the Applicant. My address is 180 North Stetson Avenue, Suite 3700, Chicago, Illinois.

Please note that the Applicant is not seeking to purchase or rezone your property. The Applicant is required by law to send you this notice because you own property located within 250 feet of the proposed development.

Sincerely,

John J. George
